# 1 Identity code

The identity code describes the external modules for the DULCOMARIN® II, series DXM. Only the M module of mounting type “W” “Wall mounting” can be ordered with operating elements and with different languages.

1) only mounting type W wall mounting / 2) only in version “2” without controls
2 About this device

The power supply module with relay DXMaP with alarm relay and solenoid valve relay supplies the DULCOMARIN® II compact with mains voltage and allows it to control 3 solenoid valves or hose pumps via pulse frequency e.g. to:

- raise / lower the pH value
- meter disinfectant
- meter flocculant
- minimise combined chlorine

The DXMaP power supply module has the following outputs:

- power relay for alarm output
- power relay output for solenoid valve or hose pump (pH correction)
- power relay output for solenoid valve or hose pump (disinfectant)
- power relay output for hose pump (flocculant) or relay output (minimising of combined chlorine)
- one mains input

2.1 Safety chapter

CAUTION!
Safety when using the P module

- The DXMaP power supply module with relay must only be used to control alarm horns, solenoid valves and hose pumps as well as to provide the power supply for the DULCOMARIN® II DXCa.
- The DXMaP power supply module with relay must only be used as part of the DULCOMARIN® II.
- The installation must only be carried out by technically trained personnel.

2.2 Storage and transport

CAUTION!
Protect the module against moisture and the effects of chemicals, even while still packaged.

Store and transport the module in its original packaging.

Ambient conditions for storage and transportation:

- Temperature: -10 °C ... 70 °C
- Max. permissible relative humidity: 95 %, non-condensing (DIN IEC 60068-2-30)
3 Assembly and installation

NOTICE!

The installation must only be carried out by technically trained personnel.

When assembling and installing this device, observe the instructions in the operating instructions "Multi-channel measuring and control system DULCOMARIN® II Swimming Pool Controller and Disinfection Controller DXCa Part 1: Assembly and installation".

Make the CAN connection according to the "Multi-channel measuring and control system operating instructions DULCOMARIN® II Swimming Pool Controller and Disinfection Controller DXCa Part 1, Assembly and Installation".

3.1 Repairs (fuse change only)

**WARNING!**
Mains voltage
Possible consequence: Fatal or very serious injuries.
External fuse necessary.
If mains voltage is connected to the device, then the fuse carrier is also under mains voltage.
Before working on the device, disconnect the device from the mains voltage and secure to prevent switching back on.

**NOTICE!**
The fuse only may be replaced by technically trained personnel. All other repair work may only be carried out by Customer Service.
Otherwise, general safety regulations apply.

Use only original fuses: Micro fuse 5 x 20 mm, 630 mA, 250 V, slow-acting (Order No. 712030).

4 Technical data

Electrical data

The DXMaP power supply module with relay contains the 24 V DC, 1 A direct current power supply unit.

Power relay for alarm output (P1):
- Type of contact: Changeover contact with interference-suppressed varistors
- Load capacity: 250 V AC, 3 A max., 700 VA
- Contact lifespan: > 10⁵ switching operations (at 3 A)

Power relay output for control variable output or limit value reporting (P2 - P4):
- Type of contact: N/O contact with varistors, interference-suppressed
- Load capacity: 250 V AC, 3 A max., 700 VA
- Contact lifespan: > 20 x 10⁶ switching operations

Nominal voltage (X1):
- 90 - 253 V AC (50 / 60 Hz)
- Maximum power consumption: 500 mA at 90 V AC // 180 mA at 253 V AC
- Internal fusing with: Micro fuse 5 x 20 mm, 630 mA, 250 V, slow-acting
- Electrical power consumption: 30 W

Degree of protection: IP 20

Ambient conditions: Storage temperature: -10...70 °C
