Operating instructions
Chlorine dioxide systems
Bello Zon® Type CDVc

Part 1

To ensure operation of the Bello Zon® system is safe and in accordance with regulations, part 1 and 2 of the operating instructions are required. Both sets of operating instructions are only valid when read together. Part 1 is only intended for ProMaqua service technicians or competent persons authorised by ProMaqua.

Please carefully read these operating instructions before use! Do not discard! The operator shall be liable for any damage caused by installation or operating errors! Technical changes reserved.

Part no. 986426

BA BEZ 027 11/10 EN
Supplementary information

Read the following supplementary information in its entirety! Should you already know this information, you have an even greater need of the Operating Instructions.

The following are highlighted separately in the document:

- Enumerated lists
- refer to references

„User interface text“

[Keys]

Information

This provides important information relating to the correct operation of the system or is intended to make your work easier.

Safety information

Safety information is identified by pictograms - see Safety Chapter.

Notes for the System Operator

This document includes notes and quotes from German guidelines relating to the system operator's scope of responsibility. This information does not discharge operators from their responsibility as an operator and is intended only to remind them or make them aware of specific problem areas. This information does not lay claim to being complete, nor applicable to every country and every type of application, nor to being unconditionally up-to-date.

Version number of the hardware and software

The version number of the hardware and software can be found here: In the display press „Equipment OFF“ [F2 SETTING], change to the menu „CAN overview“ and press the [ENTER] key. In case of complaints, or if expanding the scope of use of the device, specify the version number in addition to the identity code.

### Version

- **P** ProMaqua
- **S** Special version

### Operating voltage:

- **U** 100-230 V + 10 %, 50/60 Hz (for versions without suction)
- **A** 230 V + 10 %, 50/60 Hz (for versions with "bypass" 04)
- **B** 100-115 V + 10 %, 50/60 Hz (not available for versions with "bypass" 04 or 06)

### Bypass version, bypass monitoring

- 00 Without bypass
- 02 Bypass PVC-U with float flow meter and pump
- 04 Bypass PVC-U with float flow meter and bypass pump (not CDVc 2000)
- 06 Bypass PVC-U for storage module with water supply 230 V (only CDVc 45-600)
- 07 Bypass PVC-U for storage module with water supply 24 V (only CDVc 45-600)

### Ventilation unit

- 0 Without reactor housing with ventilation, without calibration device, but with measurement cylinder
- 1 Without reactor housing with ventilation, with calibration device
- 2 With reactor housing with ventilation, without calibration device, with measuring cylinder (only in operating voltage A or B designs).
- 3 With reactor housing with ventilation, with calibration device

### Suction lance, suction fitting for chemicals

- 0 None
- 1 Suction lance for 5..60 l-tank (only CDVc 20-600)
- 2 Suction lance for 200 l-tank (only CDVc 20-600)
- 3 Flexible suction assembly up to 5 m with two-stage level switch (only CDVc 20-600)
- 4 Suction lance for 25 l-tank with 2 40 l collecting pans without leakage probe (only CDVc 20-600)

### Mechanical design

- 0 Standard
### CDV product range, version c

2 Safety chapter

Explanation of the safety information

The following signal words are used in these operating instructions to denote different severities of danger:

<table>
<thead>
<tr>
<th>Signal word</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER!</td>
<td>This combination of symbol and signal word indicates an immediate dangerous situation that will result in death or serious injury if it is not avoided.</td>
</tr>
<tr>
<td>WARNING!</td>
<td>This combination of symbol and signal word indicates a possible dangerous situation that can result in death or serious injury if it is not avoided.</td>
</tr>
<tr>
<td>CAUTION!</td>
<td>This combination of symbol and signal word indicates a possible dangerous situation that can result in minor injury if it is not avoided.</td>
</tr>
<tr>
<td>NOTICE!</td>
<td>This combination of symbol and signal word indicates a possible dangerous situation that can result in material and environmental damage if it is not avoided.</td>
</tr>
</tbody>
</table>

Warning signs denoting different types of danger

The following warning signs are used in these operating instructions to denote different types of danger:

<table>
<thead>
<tr>
<th>Warning signs</th>
<th>Type of danger</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Corrosive" /></td>
<td>Warning – corrosive substances.</td>
</tr>
<tr>
<td><img src="image" alt="High-voltage" /></td>
<td>Warning – high-voltage.</td>
</tr>
<tr>
<td><img src="image" alt="Explosive" /></td>
<td>Warning – explosive substances.</td>
</tr>
<tr>
<td><img src="image" alt="Toxic" /></td>
<td>Warning – toxic substances.</td>
</tr>
<tr>
<td><img src="image" alt="Danger Zone" /></td>
<td>Warning – danger zone.</td>
</tr>
</tbody>
</table>
The three basic rules

1. The two components Bello Zon® acid (dilute HCl) and Bello Zon® chlorite (dilute NaClO₂) must never be brought into contact except in the reactor! Otherwise poisonous ClO₂ gas forms abruptly and can then decompose explosively!

2. Never operate the chlorine dioxide Bello Zon® CDV with undiluted acid or undiluted sodium chlorite! Otherwise poisonous ClO₂ gas forms abruptly and then decomposes explosively within the reactor!

3. The bypass water must never be exposed to a vacuum pressure! Otherwise the ClO₂ solution in the reactor is placed under a vacuum, the ClO₂ outgasses, forms a richer mixture and can decompose explosively!

Correct and proper use

- The Bello Zon® CDV system is intended solely for producing a ClO₂ containing disinfectant solution from diluted hydrochloric acid (9 %) and sodium chlorite solution (7.5 %) and for dosing it into a bypass line together with water.
- Any other uses or modifications to the system are prohibited!
- Die Bello Zon® system is not designed for treating liquids (other than water) or gaseous media as well as substances with ClO₂!
- The system must not be operated under conditions other than those described in the technical data!
- Do not allow untrained personnel to operate the Bello Zon® system! All other activities should only be carried out by trained and authorised personnel, see the following table!
- You are obliged to observe the information contained in the operating instructions at the different phases of the system's service life!
- Please observe the relevant national regulations and guidelines at every phase of the system's service life!

Qualification of personnel

<table>
<thead>
<tr>
<th>Activity</th>
<th>Qualification level</th>

</tbody>
</table>

Explanation of the terms: Technical experts

WARNING!
According to accident statistics, holiday replacements are a safety risk.
- Holiday replacements must also hold the named qualifications and have been instructed accordingly.
A technical expert is deemed to be a person who is able to assess the tasks assigned to him and recognize possible hazards based on his/her technical training and experience, as well as knowledge of applicable regulations.

**Qualified personnel**

A qualified employee is deemed to be a person who is able to assess the tasks assigned to him and recognize possible hazards based on his/her technical training, knowledge and experience, as well as knowledge of pertinent regulations.

**Instructed personnel**

An instructed person is deemed to be a person who has been instructed and, if required, trained in the tasks assigned to him/her and possible dangers that could result from improper behaviour, as well as having been instructed in the required protective equipment and protective measures.

**Customer Service department**

Customer service refers to service technicians who have received certificated training and have been authorised by ProMaqua® to work on the system.

### Personal protective equipment

- Face mask
- Rubber or plastic boots
- Protective gloves (ClO₂-resistant type!)
- Protective apron
- Full-face protective mask
- 1 replacement filter per protective mask

### Safety Equipment

Which safety equipment is available and how it is tested, is contained in the "Start up" chapter.

### Safety information

**WARNING!**

**Danger from incorrect operation**

Incorrect operation can result in dangerous conditions for the system and its surroundings.

- The operating personnel must be instructed by a ProMi- nent service technician. (Undertaken during initial com-missioning.)
- The operating instructions must be available by the system.

**WARNING!**

**Danger due to toxic and explosive ClO₂ gas**

Under rare fault conditions ClO₂ solution can escape via a leak.

- To overcome this, for example, install a gas detector which switches off the system if ClO₂ gas escapes and triggers an alarm that is readily apparent from a dis-tance. This ensure that save operation is possible with every ClO₂ system.

**NOTICE!**

**Warning of illegal operation**

Observe the regulations that apply where the device is installed.
Safety chapter

Instructions for entering a room in which a chlorine dioxide system is installed

- Access only for trained personnel.
- If there is a smell of chlorine dioxide (pungent, chlorine-like smell) access is only permitted to personnel wearing the specified protective equipment.
- If there is a smell of chlorine dioxide, immediately switch off the system from a safe position, e.g. emergency stop switch, which is installed at a distance from the system.

Note for the system operator

Keywords when searching for the necessary regulations:
- Chlorine dioxide systems
- Chlorine dioxide (possibly chlorination as well)
- Drinking water
- Food safe
- Hydrochloric acid
- Sodium chlorite
- Storage
- Dangerous substances
- Personal protective equipment

Information in the event of an emergency

- You have already come into contact with acid: See the "EC acid safety data sheet" provided by the supplier!
- You have already come into contact with chlorite: See the "EC chlorite safety data sheet" provided by the supplier!
- You have come into contact with ClO₂ solution or ClO₂ gas: See data sheet "Chlorine dioxide hazardous substance data sheet: Properties of chlorine dioxide and instructions for handling aqueous solutions" in the operating instructions, part 2, appendix!
- An orange-yellow ClO₂ gas has escaped: clear the room immediately and disconnect the power supply, for example using the emergency stop switch! Wear complete personal protective equipment and ensure the gas is precipitated out of the atmosphere using a water spray! See also the data sheet "Chlorine dioxide hazardous substance data sheet: Properties of chlorine dioxide and instructions for handling aqueous solutions" in the operating instructions, part 2, appendix!
- An orange-yellow ClO₂ solution has escaped: clear the room immediately and disconnect the power supply, for example using the emergency stop switch! Wear complete personal protective equipment and pour sodium thiosulphate solution over the ClO₂ solution, then dilute with lots of water and wash away into the drain. See also the data sheet "Chlorine dioxide hazardous substance data sheet: Properties of chlorine dioxide and instructions for handling aqueous solutions" in the operating instructions, part 2, appendix!
- The Bello Zon® system was supplied with concentrated chemicals and the dosing pumps have already pumped them as far as the reactor: clear the room immediately and disconnect the power supply, for example using the emergency stop switch! Inform the fire brigade, explaining about the risk of an explosion due to concentrated ClO₂ gas! ClO₂ gas can still explode after several hours! See also the data sheet "Chlorine dioxide hazardous substance data sheet: Properties of chlorine dioxide and instructions for handling aqueous solutions" in the operating instructions, part 2, appendix!
- The Bello Zon® system was supplied with concentrated chemicals and the dosing pumps have not yet started to pump: immediately switch the Bello Zon® system to "dosing OFF" ([Start/Stop])! Place the suction lances in separate individual buckets of water and procure drums of chemicals with dilute chemicals. Arrange for the concentrated chemicals to be properly disposed off. See also the data sheet "Chlorine dioxide hazardous substance data sheet: Properties of chlorine dioxide and instructions for handling aqueous solutions" in the operating instructions, part 2, appendix!
Sound Pressure Level

The sound pressure level is < 70 dB (A) at a maximum stroke length, maximum stroke rate, maximum counter pressure (water) according to:

DIN EN 12639 (Noise testing on liquid pumps).
3 Storage and transport

Safety information

**WARNING!**
Only return the device for repair in a cleaned state and with hydraulic components - refer to the chapter "Decommissioning"!

Only send the unit complete with a filled in Decontamination Declaration form. The Decontamination Declaration constitutes an integral part of an inspection / repair order. A unit can only be inspected or repaired when a Decontamination Declaration Form is submitted that has been completed correctly and in full by an authorised and qualified person on behalf of the operator.

The "Decontamination Declaration Form" can be found in the Appendix or under www.prominent.com.

**NOTICE!**
Danger of material damage

The device can be damaged by incorrect or improper storage or transportation!

- The device should only be stored or transported in a well packaged state - preferably in its original packaging.
- The packaged unit should also only be stored or transported in accordance with the stipulated storage conditions.
- The packaged unit should be protected from moisture and the ingress of chemicals.

Packaging

The chlorine dioxide Bello Zon® system is supplied with wooden packaging.

Scope of supply

In addition to the identity code options, the scope of supply includes:

- Flushing equipment with a vacuum relief valve - see chapter "Installation" - "Hydraulic Installation"
- The mounting kit (mounting equipment and threaded cable glands)
- Labels for suction lances / suction assemblies
- Warning signs - see chapter "Maintenance"

4 Requirements for the installation site

Safety information

CAUTION!
Warning against illegal operation
Observe the regulations that apply where the device is installed.

Requirements for the installation site

- The chlorine dioxide system must not be located outdoors.
- It must be possible to protect the chlorine dioxide system against unauthorised access.
- The site of the chlorine dioxide system must be protected against sun, frost-proof and well ventilated.
- Below 10 °C room temperature (15 °C for the CDv c 600 and 2000) heating systems may have to be used for the suction lines of the dosing pumps.
- It must be possible to transport the component containers to the system without obstruction.
- There must be an emergency exit route.
- For installation of the Bello Zon® system, a smooth, vertical wall must be available.
- There must be a water tap available.
- There must be a drain available in the floor.
- It must be possible to fit a gas detector.
- There must be a mains connection, with an emergency stop switch outside the installation room.

Note for the system operator

Below are some of the regulations which apply within Germany:

- The accident prevention regulation (UVV) "Chlorination of Water", [in German] GUV-V D5 (previously GUV 8.15), April 1979
- The German Ordinance on Hazardous Substances (GefStoffV) - especially section 17 (general duty of protection) and section 20 (operating instructions; see also Accident Prevention Regulations section 9) [in German]
5 Installation

Safety information

**WARNING!**

Danger due to the sudden unexpected escaping of toxic chlorine dioxide solution

The seals which are exposed to chlorine dioxide solution, will start to leak if they are not replaced early enough.

- The system must be set up so that it can be accessed easily for maintenance.

Fitting the panel

The supplied mounting kit contains the necessary hangar bolts, rawplugs, washers and nuts (mounting kit = plastic bags with fixings and threaded cable glands...).

Select the mounting height so that:

- The LCD screen of the control can be easily read
- The liquid level of the full component containers is below the dosing pumps
- The maximum priming lift of the dosing pumps is not exceeded, see table “Technical data” in the appendix
- as necessary, there is still sufficient space for the component containers below the panel.

Personnel:

- Technical personnel

1. Secure the Bello Zon® system on a suitable, smooth and vertical wall, as close as possible to the point of injection. Dimensions sheets - see appendix

2. After fitting brush the metallic fastenings with Vaseline to prevent corrosion.

3. Attach the warning signs according to the national regulations at the access to the chlorine dioxide system and the chemical stores or any other locations so that they are clearly visible (Warning signs according to German regulations, see in the scope of supply).

Warning labels

CAUTION!
Warning against illegal operation
Observe the regulations that apply where the device is installed.

Provided national regulations do not require otherwise, used signs of the form and type given below.

a) Attach both these signs together at the entrances to rooms in which Bello Zon® chlorine dioxide systems are set up:

<table>
<thead>
<tr>
<th>Warning sign *</th>
<th>Warning label *</th>
<th>Included text</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="" /></td>
<td>Chlor. dioxide equipment Access only for trained personnel</td>
<td>Chlorine dioxide Access only for trained personnel.</td>
</tr>
</tbody>
</table>

* Mandatory in Germany

b) Attach both these signs together at the entrances to rooms in which sodium chlorite (Bello Zon® chlorite) is stored or used:

<table>
<thead>
<tr>
<th>Warning sign *</th>
<th>Warning label *</th>
<th>Included text</th>
</tr>
</thead>
<tbody>
<tr>
<td>![image2]</td>
<td>Sodium chlorite NaClO₂</td>
<td>Sodium chlorite NaClO₂</td>
</tr>
</tbody>
</table>

* Mandatory in Germany
c) Attach this sign in rooms in which sodium chlorite (Bello Zon® chlorite) is handled:

<table>
<thead>
<tr>
<th>Warning label *</th>
<th>Included text</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use storage tank and devices alternately. Sodium chlorite + acid = highly toxic chlorine dioxide gas. DANGER TO LIFE!</td>
<td>Do not interchange containers and devices. Sodium chlorite + acid = highly toxic chlorine dioxide gas. Danger to life!</td>
</tr>
</tbody>
</table>

* Mandatory in Germany

This applies to stores and decanting rooms in which the chemical drums are set up, which are then connected to the Bello Zon® systems.

**Installation location gas detector (accessories)**

Install the gas detector at approximately 1m height in the vicinity of the gas generation system so that it can provide reliable warnings!
6 Installation

6.1 Hydraulic Installation

Safety information

**CAUTION!**
Warning against illegal operation
Observe the regulations that apply where the device is installed.

**DANGER!**
Warning of toxic chlorine dioxide vapour
Toxic chlorine dioxide vapour can escape because of a broken bypass line.
- Only use PVC or PVDF pipes for the bypass line.
- Chlorine dioxide corrodes other materials too strongly.
- Only use PVC pipes of pressure rating PN 16 for the bypass line to allow for long-term scaling of the PVC.
- The maximum permissible system operating pressure must not be exceeded - see "Safety equipment bypass line" - "PVC bypass line specifications"). Pressure surges must also not occur.

**WARNING!**
The reactor can explode
This can result in uncontrolled sucking through of the chemicals, if the bypass line of the Bello Zon® system enters a vacuum pressure state. Subsequently, if a high vacuum pressure exists together with the simultaneous formation of gas/water mixed phases chlorine dioxide can gas out. Under unfavourable circumstances, the critical gas concentration of 300 g/m³ is exceeded and an explosion of the reactor can occur.
- Take appropriate measures to ensure the bypass line of the Bello Zon® system does not become subject to a vacuum.

Qualification

Personnel: Technical personnel

Main components

In essence, the following components must be hydraulically installed:
- Bypass line
- Safety equipment bypass line
- Additional safety fittings
- Flow generator bypass line
- Hydraulic module "water supply"
- Point of injection
- Flushing equipment with vacuum relief valve
- Suction lances / suction assemblies acid and chlorite
- Suction lance and level switch for water
- Water supply suction mechanism (optional)
Installation examples

Installation example A

1 Water meter (frequency or analog signal)  9 Point of injection (flange and immersion pipe)
2 Main water supply  10 Delay tank
3 Bypass line  11 Sample water line
4 Bypass pump  12 Chlorine dioxide measuring point (e.g. with CDE sensor)
4a Hydraulic module "water supply"  13 Bello Zon® acid in safety bund
5 Water connection for ventilation  14 Bello Zon® chlorite in safety bund
6 Reactor housing vent valve  16 Back pressure valve
7 Reactor outlet valve  17 Pre-storage module ClO2 solution
8 Flushing equipment with vacuum relief valve
Installation example B

![Diagram of Installation example B]

Fig. 5: Installation example B: the reactor outlet valve (7) of the Bello Zon® system is located above the point of injection (9) Back pressure valve and vent valve required in the bypass line.

Installation example C

![Diagram of Installation example C]

Fig. 6: Installation example C: Bello Zon® system with "bypass version for storage module"
6.1.1 Bypass line

DANGER!
Warning of toxic chlorine dioxide vapour
Toxic chlorine dioxide vapour can escape because of a broken bypass line.
- Only use PVC or PVDF pipes for the bypass line. Chlorine dioxide corrodes other materials too strongly.
- Only use PVC pipes of pressure rating PN 16 for the bypass line to allow for long-term scaling of the PVC.
- The maximum permissible system operating pressure must not be exceeded - see "Safety equipment bypass line" - "PVC bypass line specifications"). Pressure surges must also not occur.

WARNING!
Warning of toxic chlorine dioxide vapour
Toxic chlorine dioxide vapour can escape through a leaking bypass line. Some threaded connectors are loosened in the factory prior to transport.
- Check whether all threaded connectors of the bypass line on the panel are correctly tightened.

WARNING!
Danger of an explosion in the bypass line
Particles in the bypass water could block a flow meter. This can then lead to an unacceptably high concentration of chlorine dioxide. If a bypass line is not completely full with water, a critical gas phase can form, resulting in an explosion in the bypass line.
- If necessary, install a dirt-trap filter in the suction line.

Protect transparent pipes carrying ClO₂ containing water against light radiation (direct sunlight, fluorescent tubes, ...). Otherwise the photochemical breakdown of the ClO₂ in the pipes will cause the ClO₂ concentration to fall unexpectedly in the consumption location.

The bypass line is either fed from the main water supply or separately. The purpose of the bypass line is to dilute the chlorine dioxide concentration of the chlorine dioxide solution from the reactor from approximately 20 g/l (= 20,000 ppm) to approximately 0.1 - 1 g/l (= 100 - 1000 ppm) and to transport this solution to the point of injection.
6.1.2 Safety equipment bypass line

**WARNING!**
**The reactor can explode**
If the chlorine dioxide solution in the reactor becomes subject to a vacuum, it can explode.
- Hence the bypass line should be installed so that it is impossible for a vacuum to arise, not even when the machine is stationary or in the event of a fault.

**WARNING!**
**Risk of explosion in the bypass line**
If the dosing remains switched on when there is no water flow, it can then lead to an unacceptably high concentration of chlorine dioxide in the bypass line. If in addition, a bypass line is not completely full with water, a critical gas phase can form, resulting in an explosion in the bypass line.
- In Bello Zon® systems with bypass monitoring, the Bello Zon® control switches the dosing off if the minimum contact is correctly set.
- In Bello Zon® systems without bypass monitoring, the operator must ensure there is a sufficient water flow as long as dosing is switched on. E.g. use a flow meter with a minimum contact.

* with PVC piping

Particular risk of vacuum exists, especially if the water is stationary, where:
- the flow direction reverses in the main water supply pipe (of large diameter) - non-return valves are never 100% watertight!
- the main water supply line runs beneath the reactor outlet valve of the Bello Zon® system
- the bypass line is very long, especially where this runs downwards, i.e. the reactor outlet valve (7) of the Bello Zon® system lies above the point of injection (9) (h less than "0"

*Installation examples* on page 19, installation example B). Then install a vent valve at the highest point on the bypass line, as shown in the figure. This ensures that there is always at least atmospheric pressure in the bypass line.

Depending on the application and the particular circumstances of the installation site, the chlorine dioxide system must be supplemented with the corresponding safety-relevant accessories.

### 6.1.3 Flushing equipment with vacuum relief valve

The supplied flushing equipment with vacuum relief valve must be installed in the bypass line after the Bello Zon® system, see *Installation examples* on page 19 so that when the reactor is started up, it can be filled safely and in a depressurised state, and so that it is possible to safely rinse and empty the reactor ready for maintenance work.

In addition to this the valve acts to break the vacuum, should the bypass line enter a vacuum state.
6.1.4 Back pressure valve

If necessary, install the following in the bypass line:

**Back pressure valve**

b) A back pressure valve at the end of the bypass line, shortly before the point of injection (opening pressure > 1.5 bar) (see fig. 5 and 6)! Use the back pressure effect-free design so that operation is maintained even at high back pressures!
6.1.5 Flow generator bypass line

To create a flow in the bypass line, an alternative is to install:
- A choke valve in the main water supply line, e.g. gate, spring or weight-loaded non-return valve or
- A bypass water pump in the bypass line prior to the Bello Zon® system
Here, the bypass pump can be locked via the control of the Bello Zon® system.

When installing a bypass pump, the fitting of an inclined seat valve is recommended to permit regulation of the flow at the inlet to the Bello Zon® system.

<table>
<thead>
<tr>
<th>Accessories</th>
<th>Part no.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inclined seat valve</td>
<td>1001877</td>
</tr>
</tbody>
</table>

6.1.6 Hydraulic module "water supply"

If in the case of systems with "Bypass version for storage module" chlorine dioxide solution is to be produced for storage, the "Water supply" hydraulic module is installed at the input to the bypass line.

The "water supply" hydraulic module comprises:
- 1/2˝ brass ball valve, internal thread
- Filter insert
- Pressure reducer
- Manometer
- Solenoid valve
- Flow meter
- Needle valve
- Threaded connector PVC, DN15

Fig. 9: Hydraulic module "water supply"

6.1.7 Point of injection

Install an "immersion pipe in the main water supply line (for better mixing of the ClO₂ in the main water flow):

The scope of supply includes Tangit cleaner, Tangit glue and a DN25 ball valve as a shut-off valve for shortening the immersion pipe.

1. Shorten the immersion pipe to the required length.
2. Glue the ball valve to the shortened end.
3. Fit the immersion pipe using a site supplied DN50 DIN flange.
6.1.8 Protective filter

When using a turbine wheel flow meter and solid particles are present in the bypass water, connect a protective filter upstream.

<table>
<thead>
<tr>

</tbody>
</table>
6.1.11 Suction lances / suction assemblies acid and chlorite

Safety information

**WARNING!**
Warning of toxic chlorine dioxide gas
Toxic chlorine dioxide can arise outside the reactor.
– Allocate parts correctly to the acid and chlorite sides.

**WARNING!**
Warning of corrosive acid or toxic chlorite solution
Corrosive acid or toxic chlorite can escape at the connections.
– Only use suitable hoses and connector kits.

Only use suction lances or suction assemblies with two-stage level switches and round plugs. Other suction lances are not suitable.

Installing suction hoses

The suction hoses must not be plugged into the component container yet!

1. Adjust the length of each suction lance - the foot valve must subsequently float in the container just above the floor.

2. Stick the "Acid" and "Chlorite" labels (as supplied) onto the suction lance heads or suction hoses so they are clearly legible.

"Acid", red, is attached on the left - "Chlorite", blue on the right!

3. Shorten the suction hoses so that subsequently they rise continuously and are free from tension.

4. Pull the cap nut (4) and clamp ring (3) over the suction hose (5) - see figure Fig. 11.

5. Push in the hose end up to the stop over the nozzle (2) (it may be necessary to slightly widen the hose end).

6. Fit the nozzle on the pump hose valve (1).

7. Press the suction hose (5) on to the nozzle (2) and tighten the cap nut (4).

8. Pull on the suction hose (5) briefly and tighten up the cap nut (4).
6.1.12 Heating system for chemical pipelines

With certain systems and ambient temperatures below 10 °C, the suction hoses for the chemicals must be heated using the heating system.

</tbody>
</table>

6.1.13 Water supply suction mechanism (optional)

For safety reasons, the suction mechanism (comprising the water jet pump and solenoid valve) regularly sucks the air out of the reactor housing.

**WARNING!**

**Toxic chlorine dioxide gas**

The suction mechanism cannot suck toxic chlorine dioxide gas, which may have arisen due to an accident, out of the reactor cupboard, because, in spite of the open solenoid valve, no water flows in its feed line. When the system is stationary, this is the case in the bypass line.

- Therefore route a separate water pipeline to the water jet pump. The bypass line cannot and must not be used for this purpose.
6.2 Electrical Installation

**Note for the system operator**
Please observe the local regulations for electrical installation work!

*To differentiate between two essentially identical cables (e.g. supply voltage to the acid metering pump and the chlorite metering pump), different identification rings should be attached to them. (“A” for acid, “C” for chlorite).*

**Qualification level**

Personnel: 
- Electrician

**Main components**
In essence, electrical installation involves the following work:
- Connect the level switch
- Install the minimum contact flow meter
- Wire the control
- Install the bypass pump
- Install the gas detector
- Install the emergency stop switch
- Preparing the mains connection

### 6.2.1 Connect the level switch

1. Connect the round plug for the acid suction lance (level switch) to the “Level” input on the left pump.

2. Connect the round plug for the chlorite suction lance (level switch) to the “Level” input on the right pump.

3. Connect the cable of the “FULL level monitor” to the control - see the wiring diagram.

*Fig. 12: Pump "level" input*
6.2.2 Install the minimum contact flow meter

**WARNING!**
**Risk of explosion in the bypass line**
If the dosing remains switched on when there is no water flow, it can then lead to an unacceptably high concentration of chlorine dioxide in the bypass line. If in addition, a bypass line is not completely full with water, a critical gas phase can form, resulting in an explosion in the bypass line.

- In Bello Zon® systems with bypass monitoring, the Bello Zon® control switches the dosing off if the minimum contact is correctly set.
- In Bello Zon® systems without bypass monitoring, the operator must ensure there is a sufficient water flow as long as dosing is switched on. E.g. use a flow meter with a minimum contact.

Install the sensors according to the chapter "Electrical Installation".

6.2.3 Wire the control

**Only CDVc 20 ... 120:** So that it is easier to lead the cable into the control housing, remove the housing from the panel, see below.

1. Loosen the 4 housing screws and place the front part in the parked position.
2. Feed cables into the threaded cable glands. Where there are multiple sealing inserts (see figure below, "Fit threaded cable gland"), observe the permitted cable cross-section, see "Table Clamping Range" below in the appendix.
3. Further steps are contained in .
   Thereafter please continue with the following steps:
4. Tighten the union nuts (see , item 4) of the threaded cable glands so that they are leak-tight.
5. Fit the front part on the rear part.

**WARNING!**
**Danger of an electric shock**
If moisture penetrates into the control, an electric shock may occur.

- Once again check the seating of the seals to ensure an IP 65 rating is correctly achieved.

6. Check the seating of the seal once again.
7. Manually tighten the housing screws until hand-tight.
6.2.3.1 Removing the housing from the panel

Removing the housing

1. Pull the two snap-hooks (1) at the bottom of the housing outwards. The housing snaps upwards slightly.
2. Press the housing upwards and fold away at the top away from the panel.

Fitting the housing

1. Clip the housing in at the bottom in the wall panel (①) and use light pressure at the top to press it against the wall panel (②).
2. Check whether the wall panel is clipped in at the top and press downwards until it audibly engages (③).
6.2.3.2 Connecting the terminals

1. Remove the cable insulation according to and crimp on the corresponding cable end sleeves.
2. Connect the cables according to the wiring diagram.
3. Check all of the cabling using the wiring diagram.
4. Tighten the clamping screws of the cable glands until they are leak-tight.

- To install the leads for terminals XE1 to XA1 simply insert the leads into the terminals.
- To release the leads for terminals XK1 to X2 again, simply press on the white button of the required terminal using the tip of a ball-point pen and pull the lead out.
- The wiring diagram is contained in the appendix.
6.2.4 Installing the bypass pump

**WARNING!**
Control faults possible
- Fit the supplied RC member according to the wiring diagram between the bypass pump and the control.

**CAUTION!**
- For a bypass pump with a power rating up to the limit rating (see the table below), the control can supply the mains voltage. Consequently the bypass pump is simultaneously locked with the chlorine dioxide generator.
- For bypass pumps with electrical ratings greater than the limit rating, use a contactor relay.

<table>
<thead>
<tr>
<th>Data</th>
<th>Value</th>
<th>Unit</th>

<td>1.1</td>
<td>VA</td>
</tr>
<tr>
<td>Limit rating at 115 VAC</td>
<td>0.55</td>
<td>VA</td>
</tr>
</tbody>
</table>

6.2.5 Installing the gas detector (accessories)

To increase safety, it is worthwhile installing a chlorine dioxide gas detector. Fit the device to the control in accordance with the wiring diagram. As soon as the gas detector senses chlorine dioxide, it switches the system off, which simultaneously trips an alarm.

6.2.6 Installing the emergency stop switch

**WARNING!**
After particular incorrect operations or faults, it can be dangerous to approach the system. Then you must at least switch it off using an emergency stop switch, which is located at a safe distance.
- Install an emergency stop switch in the mains supply cable.
- The emergency stop switch must be installed in an easily accessible, invulnerable position in the vicinity of the door of the installation room of the chlorine dioxide system and must be labelled as such.
- The emergency stop switch must disconnect the electrical supply equipment connected to the system from the mains.

6.2.7 Preparing the mains connection

**CAUTION!**
If the system is started up unintentionally, chlorine dioxide may arise within the system.
- Only connect the Bello Zon® system to the mains voltage when starting it up!
CAUTION!
Warning against illegal operation
Observe the regulations that apply where the device is installed.

Prerequisites:
The power supply cables for the metering pumps and the control are already fitted in the factory.

The wiring of a bypass pump (accessories) to the distribution box and from there onwards to the control must be carried out on site by the customer.

- - - Preparation of the Bello Zon® system is now sufficient to permit its starting up by a ProMaqua service technician, see part 2 of the operating instructions! - - -
We, hereby declare that, ProMaqua GmbH
Maaßstraße 32/1
D - 69123 Heidelberg

on the basis of its functional concept and design and in the version marketed by us, the product specified in the following complies with the relevant, fundamental safety and health stipulations laid down by EC regulations.
Any modification to the product not approved by us will invalidate this declaration.

Product description: Chlorine dioxide generating system Bello Zon®

Product type: CDVe...

Serial number: Please refer to the type plate on the device

Relevant EC regulations
EU - Machinery Directive (2006/42/EC)
EU Pressure Equipment Directive (97/23/EC)
Compliance with the protection targets of the Low Voltage Directive 2006/95/EC according to Appendix I, No. 1.5.1 of the Machinery Directive 2006/42/EC

Harmonised standards applied, in particular:
EN ISO 12100-1, EN ISO 12100-2, EN 809,
EN 60204-1, EN 60529, EN 61000-6-1/2/3/4

Harmonised national standards and other technical specifications applied, in particular:
DVGW standards: technical rules W 224 and W 624

Technical documents have been compiled by documentation specialist: Dr. W. Weibler
Maaßstraße 32/1

The metering figures relate to 5 bar back pressure and an ambient temperature of 20 °C. The minimum capacity per hour is based on the fact that when the system is operating at below 5 % of the nominal capacity, continuous metering is no longer possible, due to the then low pumping frequency of the metering pumps. When systems are not operating continuously, the reactor contents must be changed at least twice a day. The system should not, therefore, be operated below the stated minimum capacity/day.

** Suction length at 100% stroke length.
*** without bypass pump, flushing equipment and "water supply" module.
# With water, with moist valves, without back pressure.

#### Micro fuse 5 x 20 mm:

The fuses are each contained in a fuse holder with a bayonet coupling. They are located in the terminal box of the control, on the right above the mains voltage terminals. For the layout, see figure below.

---

#### Inputs

Digital inputs for contact water meter with reed-contact or Namur water meter with pulse width > 5 ms (XK8:3 and XK8:4):
- Frequency range: 0.25 ... 20 Hz
- Inputs: based on DIN 19 234 (Namur)
- Supplied open circuit voltage: 8.2 V
- Switching point: 4 kΩ

Contact input for contact water meter with Hall sensor or IDM with frequency output (XK8:2 and XK8:3):

- **Hall sensor**:
  - Integrated supply voltage: +5 V, 10 mA
  - Contact gap: 0.1 ... 10 l / pulse

- **IDM (open collector)**:
  - Frequency range: 10 ... 10000 Hz
  - Pulse width: > 20 μs

Contact inputs (XK3 ... XK6):
- for contacts or switching transistors:
  - Open circuit voltage: 12 V ± 1 V
  - Short circuit current: 5 mA

---

*Fig. 19: Fuse layout in the control*
Contact: open, $R > 100 \, \text{k\Ohm}$
Contact: closed, $R > 1 \, \text{k\Ohm}$

**Standard signal outputs (mA) (XE1 and XE2):**
- $0/4 \ldots 20 \, \text{mA, isolated}$
- Insulation voltage: $500 \, \text{V}$
- Input resistance: $50 \, \Omega$
- Load capacity: $30 \, \text{mA}$
- Inputs with 2 conductors
- Connection (sliding supply): Supply voltage $22.0 \ldots 25.0 \, \text{V}$
- Measuring accuracy: $\pm 1 \%$ of the measuring range (at $25 \, ^\circ\text{C}$)

**Outputs**

**Switched mains outputs:**
- X12:1, 5, 9: “Bypass pump” max. 6 A constant current

**Alarm relay (XR1:2 and XR1:1):**
- Type of contact: Change-over contact
- Load capacity: $250 \, \text{V AC / 3 A / 100 VA}$

**Warning relay (XR2:1 and XR1:1):**
- Type of contact: N/O
- Load capacity: $250 \, \text{V AC / 3 A / 100 VA}$

**Operating indicator relay (XR2:2 and XR1:1):**
- Type of contact: N/O
- Load capacity: $250 \, \text{V AC / 3 A / 100 VA}$

**Standard signal outputs (mA) (XA1):**
- $0/4 \ldots 20 \, \text{mA, potential-free}$
- Maximum apparent ohmic resistance: $600 \, \Omega$

11 Ordering Information

Function extensions Bello Zon® control

With the Bello Zon® control, certain identity code features such as “Control” and “Extended inputs and outputs” can be expanded with certain features such as analog inputs or measurement and control features. To enable this, a suitable release code must be ordered from ProMinent®, suitable for the serial number of the control. A separate installation and configuration guide describes how the identity code features are enabled.

Back pressure valve

In installations with long bypass lines, especially when these are routed downwards where and the point of injection lies below the Bello Zon® system, as well as with installations with fluctuating back pressure, a back pressure valve which is free from back pressure effects must be fitted.

Chlorine dioxide injection point from PVC-U

For homogeneous distribution of the chlorine dioxide enriched bypass water in the main water supply pipe an immersion pipe is to be used, so that the mixing and distribution of the chlorine dioxide is optimized.

The immersion pipe must shorted in-situ to the desired length. Accordingly, included in the scope of supply is Tangit cleaner and glue as well as a DN 25 ball valve as a shut-off valve.

The immersion pipe is installed using a site supplied DN 50 DIN flange.

**Bypass pump**

Booster pumps made of cast iron (GG) or stainless steel (SS) for operation in the bypass line. Electrical version 220-230 V, 50 Hz, with integrated overload protection.

The required bypass flow should be considered when selecting a suitable bypass pump. The following flow data is recommended for the different systems:

<table>
<thead>
<tr>
<th>System types</th>
<th>Bypass line</th>
<th>Diameter</th>
<th>Flow</th>
</tr>
</thead>
<tbody>
<tr>
<td>CDVc 20 - 600</td>
<td>DN 25</td>
<td>32</td>
<td>0.5 ... 2.5</td>
</tr>
<tr>
<td>CDVc 2000</td>
<td>DN 40</td>
<td>50</td>
<td>1.5 ... 10</td>
</tr>
</tbody>
</table>

PVC should be used as the material for the bypass. The thickness should at least correspond to the pressure range PN 10, or even better PN 16 (bar).

12 Decontamination declaration

Decontamination declaration
(see download: www.prominent.com)

Because of legal regulations and for the safety of our employees and operation equipment, we need the „declaration of decontamination”, with your signature, before your order can be handled.
Please make absolutely sure to include it with the shipping documents, or – even better – attach it to the outside of the packaging.

Please return your products to:
