# ProMinent® Sigma X: Sigma/1 Motor Diaphragm Metering Pumps

## Overview: Sigma/ 1 control type (S1Cb)

The Sigma/1 motor diaphragm metering pumps are produced with a high-strength inner housing for parts subject to load as well as an additional plastic housing to protect against corrosion. The capacity range extends from 5.3 to 38 gph (20 - 144 l/h) and pressures up to 174 psig (12 bar). Stroke length is 0.16 in

Under defined conditions and when installed correctly, the reproducibility of the metering is better than  $\pm 2\%$  at a stroke length of between 30 % and 100 % (instructions in the operating instructions manual must be followed).

In all motor-driven metering pumps without integrated overload protection, for safety reasons, suitable overload protection must be provided during installation. (see [page 148](#) for spare parts)

## Sigma/ 1 Basic Type (S1Ba)

The Sigma/ 1 basic type is a motor-driven metering pump without internal electronics. Various NEMA 56C frame motors can be used depending upon the application requirements. The Sigma 1 Basic pump is also suitable for use with inverter duty and DC motors for varying flow requirements.

# ProMinent® Sigma X: Sigma/1 Motor Diaphragm Metering Pumps

## Sigma/ 1 control type (S1Cb)

For optional control via contact or analog signals (e.g. 0/4 - 20 mA) the Sigma control type results in good adaptability, even in fluctuating metering requirements.

The microprocessor control is an optimum combination of speed control and stop & go operation, i.e. it works in a wide control field with customized fine adjustment. Moreover it enables an optimum metering result thanks to the metering behavior of the metering pump being matched to the chemicals or application.

The control system measures the movement and speed profile in conjunction with the power demand. This leads to a real reduction in the actually required power, which means an increase in efficiency.

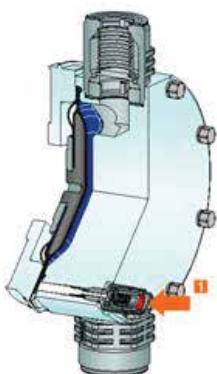

## Detachable operating unit (HMI)

The operating unit (HMI) can be attached directly to the metering pump or mounted on the wall alongside the pump or completely removed. This provides the operator with a wide range of options for the integration of a metering system into the overall system that it is readily accessible and easy to use. Moreover, the removable operating unit offers additional protection against unauthorized operation of the metering pump or against changing of the pump settings.

The Sigma X features a NEW removable HMI control unit with innovative click-wheel and 4 operating buttons. An illuminated LCD display provides information about the relevant operating status. LEDs on the operating unit and the control unit indicate the active pump functions or the pump status.

## Diaphragm rupture warning system

The liquid end has a patented multilayer safety diaphragm as standard and a visual diaphragm rupture indicator.

The diaphragm is coated on both sides with PTFE film. This coating ensures that no leakage to the outside occurs even if the diaphragm ruptures. If the diaphragm ruptures, feed chemical enters between the diaphragm layers and thus triggers a mechanical indication or an alarm via the sensor area. This concept ensures reliable metering - even under critical operating conditions.

### Metering profiles

Metering profiles ensure optimum metering results, thanks to the metering behavior of the metering pump being matched to the chemicals or application.

The stroke movement of the diaphragm pump is continuously measured and controlled, so that the stroke is executed according to the desired metering profile. The pump can be operated in normal mode (**Diagram 1**), with optimized discharge stroke (**Diagram 2**) or with optimized suction stroke (**Diagram 3**). Three typical metering profiles are shown schematically with the behavior over time.

In normal operating mode the time behavior for the suction stroke and the discharge stroke is similar (**Diagram 1**). In the mode with optimized discharge stroke (**Diagram 2**) the discharge stroke is lengthened while the suction stroke is executed as quickly as possible. This setting is, for example, useful for applications that require optimum mixing behavior and optimized chemical mixing.

In the mode with the optimized suction stroke (**Diagram 3**), the suction stroke is carried out as slowly as possible, which permits precise and trouble-free metering of viscous and gaseous media. This setting should also be chosen to minimize the NPSH value.

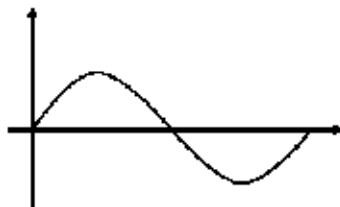

Diagram 1: Discharge stroke, suction stroke equal

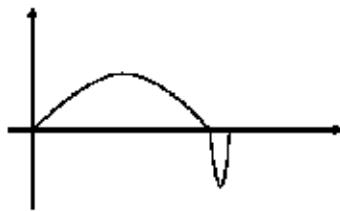

Diagram 2: long discharge stroke, short suction stroke

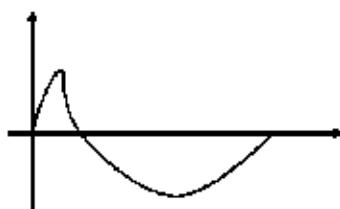

Diagram 3: short discharge stroke, long suction stroke

## Specifications (S1Ba and S1Cb)

### General:

|                           |  |  |
|---------------------------|--|--|
| Maximum stroke length:    | 0.16" (4.0 mm)   |  |
| Power cord:               | 6 feet (2 m) 2 wire + ground (supplied on control versions)  |  |
| Stroke frequency control: | S1Ba: Constant speed or optional DC/SCR drive or AC inverter<br>S1Cb: Microprocessor control version with innovative start/stop and variable speed control proportional to set frequency or external control signal. |  |
| Stroke counting:          | Standard on S1Cb   |  |

### Materials of construction

Housing: Glass-filled Luranyl™ (PPE)

| Wetted materials of construction: | Liquid End                               | PVDF                | 316 SS            |
|-----------------------------------|--|---------------------|-------------------|
|                                   | Suct./Dis. Connectors                    | PVDF                | 316 SS            |
|                                   | Seals                                    | PTFE/Viton®         | PTFE/Viton®       |
|                                   | Check Balls                              | Ceramic SS          |                   |
|                                   | Pressure Relief Valves:                  | PVDF/Viton® O-rings | SS/Viton® O-rings |
| Viscosity ranges:                 | Liquid end version                       | Max. strokes/min    | Viscosity (mPas)  |
|                                   | Standard                                 | 180 0-200           |                   |
|                                   | With valve springs                       | 130                 | 200-500           |
|                                   | With valve springs and suction-side feed | 90                  | 500-1000*         |

\* Only when properly installed & adjusted

### Sound pressure level:

Sound pressure level LpA < 70 dB in accordance with EN ISO 20361:2010-10 at max. stroke length, max. stroke rate, max. back pressure (water)

### Drive:

Cam and spring-follower (lost motion)

### Lubrication:

Sealed grease lubricated bearings and gearing

### Warranty:

Two years on drive, one year on liquid end.

### Factory testing:

**Each pump is tested for rated flow at maximum pressure.**

### Industry Standard:

CE approved, CSA available (standard in Canada), NSF/ANSI 61

### Diaphragm materials:

PTFE faced EPDM with Nylon reinforcement and steel core

### Liquid end options:

Polyvinylidene Fluoride (PVDF) or 316 SS, with PTFE faced Viton® seals

### Check valves:

Single ball check, PVDF and SS versions.

### Repeatability:

When used according to the operating instructions, better than ±2%

### Max. fluid operating temp:

| Material | Constant<br>(Max. Backpressure) | Short Term<br>(15 min. @ max.30 psi) |
|----------|---------------------------------|--------------------------------------|
| PVDF     | 149°F (65°C)                    | 212°F (100°C)                        |
| 316 SS   | 194°F (90°C)                    | 248°F (120°C)                        |

### Diaphragm failure indication:

Visual indicator is mandatory. The delivery unit has a patented multilayer safety diaphragm as standard and a visual diaphragm rupture indicator.

### Max. solids size in fluid:

0.3 mm

### Stroke length adjustment:

Manual, in increments of 1%. Motorized stroke length adjustment is available.

### Sigma/1 Basic Version

### Motor:

See available motors in Identcode

Certified to

## Specifications (S1Ba and S1Cb) Cont.

### Sigma/1 Control Version

|   |  |
|---|--|
| Control Function:                                   | At stroke frequencies equal to or greater than 33%, the integral AC variable frequency drive continuously varies the motor speed in a linear response to the incoming signal. At stroke frequencies less than 33%, the motor starts and stops according to a control algorithm to provide the desired stroke frequency. In the start-stop mode the motor speed is constant at approximately 580 RPM. |
| Enclosure rating:                                   | (IP 65)  |
| Pump power requirements:                            | ph, 115V-230V, 50/60 Hz (internally converted to drive below motor)  |
| Motor data:   | Totally enclosed, fan cooled (IP55); class F insulation; IEC frame; 1/8 HP (0.09 kW) 230 V, 3 phase (0.7 A)  |
| Relay load  |  |
| Fault relay only (option 1):                        | Contact load: 230 VAC, 8 A, 50/60 Hz   |
| Operating life: > 200,000 switch functions          |  |
| Fault and pacing relay Contact load:<br>(Option 3): | max. 24 V, AC/DC, max. 100 mA<br>maximum 200,000 switch cycles   |
| Contact closure:                                    | 100 ms (for pacing relay)  |
| Analog output signal:                               | maximum impedance 300 W  |
| Isolated 4-20 mA output signal                      |  |
| BUS interface options available:                    | CANopen, PROFIBUS DP   |
| Pulse contact/remote pause contact:                 | With voltage-free contact, or semiconductor sink logic control (not source logic) with a residual voltage of <700 mV. The contact load is approximately 0.5 mA at + 5 VDC. (Note: Semiconductor contacts that require >700 mV across a closed contact should not be used.)   |
| Max. pulse frequency:                               | 25 pulses/sec  |
| Contact impedance:                                  | 10 kOhm  |
| Max. pulse memory:                                  | 65,535 pulses  |
| Necessary contact duration:                         | 20ms   |
| Analog - current input burden:                      | Approximately 120 Ohm  |
| Max. allowable input current:                       | 50 mA  |
| Power requirements:                                 | Single phase, 115-230 VAC + 10%, 50/60 Hz  |

# ProMinent® Sigma X: Sigma/2 Motor Diaphragm Metering Pumps

## Overview: Sigma/ 2 control type (S2Cb)

The Sigma/2 motor diaphragm metering pumps are produced with a high-strength inner housing for parts subject to load as well as an additional plastic housing to protect against corrosion. The capacity range extends from 14.7 to 111 gph (56 - 420 l/h) and pressures up to 232 psig (16 bar). Stroke length is 0.20 in

Under defined conditions and when installed correctly, the reproducibility of the metering is better than  $\pm 2\%$  at a stroke length of between 30 % and 100 % (instructions in the operating instructions manual must be followed).

In all motor-driven metering pumps without integrated overload protection, for safety reasons, suitable overload protection must be provided during installation. (see [page 148](#) for spare parts)

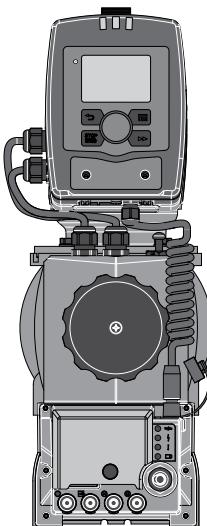

## Sigma/ 2 Basic Type (S2Ba)

The Sigma/ 2 basic type is a motor-driven metering pump without internal electronics. Various NEMA 56C frame motors can be used depending upon the application requirements. The Sigma 2 Basic pump is also suitable for use with inverter duty and DC motors for varying flow requirements.

# ProMinent® Sigma X: Sigma/2 Motor Diaphragm Metering Pumps

## Sigma/ 2 control type (S2Cb)

For optional control via contact or analog signals (e.g. 0/4 - 20 mA) the Sigma control type results in good adaptability, even in fluctuating metering requirements.

The microprocessor control is an optimum combination of speed control and stop & go operation, i.e. it works in a wide control field with customized fine adjustment. Moreover it enables an optimum metering result thanks to the metering behavior of the metering pump being matched to the chemicals or application.

The control system measures the movement and speed profile in conjunction with the power demand. This leads to a real reduction in the actually required power, which means an increase in efficiency.

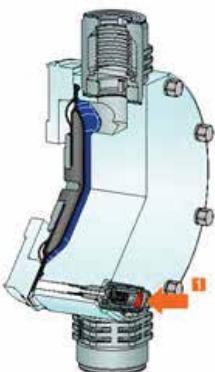

## Detachable operating unit (HMI)

The operating unit (HMI) can be attached directly to the metering pump or mounted on the wall alongside the pump or completely removed. This provides the operator with a wide range of options for the integration of a metering system into the overall system that it is readily accessible and easy to use. Moreover, the removable operating unit offers additional protection against unauthorized operation of the metering pump or against changing of the pump settings.

The Sigma X features a NEW removable HMI control unit with innovative click-wheel and 4 operating buttons. An illuminated LCD display provides information about the relevant operating status. LEDs on the operating unit and the control unit indicate the active pump functions or the pump status.

## Diaphragm rupture warning system

The liquid end has a patented multilayer safety diaphragm as standard and a visual diaphragm rupture indicator.

The diaphragm is coated on both sides with PTFE film. This coating ensures that no leakage to the outside occurs even if the diaphragm ruptures. If the diaphragm ruptures, feed chemical enters between the diaphragm layers and thus triggers a mechanical indication or an alarm via the sensor area. This concept ensures reliable metering - even under critical operating conditions.

### Metering profiles

Metering profiles ensure optimum metering results, thanks to the metering behavior of the metering pump being matched to the chemicals or application.

The stroke movement of the diaphragm pump is continuously measured and controlled, so that the stroke is executed according to the desired metering profile. The pump can be operated in normal mode (**Diagram 1**), with optimized discharge stroke (**Diagram 2**) or with optimized suction stroke (**Diagram 3**). Three typical metering profiles are shown schematically with the behavior over time.

In normal operating mode the time behavior for the suction stroke and the discharge stroke is similar (**Diagram 1**). In the mode with optimized discharge stroke (**Diagram 2**) the discharge stroke is lengthened while the suction stroke is executed as quickly as possible. This setting is, for example, useful for applications that require optimum mixing behavior and optimized chemical mixing.

In the mode with the optimized suction stroke (**Diagram 3**), the suction stroke is carried out as slowly as possible, which permits precise and trouble-free metering of viscous and gaseous media. This setting should also be chosen to minimize the NPSH value.

| Liquid End:                              | PVDF   | 316 SS           |                  |
| Suct./Dis. Connectors:                   | PVDF   | 316 SS           |                  |
| Seals:                                   | PTFE   | PTFE             |                  |
| Check Balls:                             | Ceramic  | SS               |                  |
| Viscosity ranges:                        | Liquid end version   | Max. strokes/min | Viscosity (mPas) |
|  | Standard   | 180              | 0-200            |
|  | With valve springs   | 130              | 200-500          |
|  | With valve springs and suction-side feed   | 90               | 500-1000*        |
|  | * Only when properly installed & adjusted  |                  |                  |
| <i>Sound pressure level:</i>             | Sound pressure level LpA < 70 dB in accordance with EN ISO 20361:2010-10 at max. stroke length, max. stroke rate, max. back pressure (water)   |                  |                  |
| <i>Drive:</i>                            | Cam and spring-follower (lost motion)  |                  |                  |
| <i>Lubrication:</i>                      | Oil lubricated   |                  |                  |
| <i>Recommended oil:</i>                  | ISO VG 460, such as Mobil Gear Oil 634   |                  |                  |
| <i>Oil quantity:</i>                     | Approximately 0.6 quart (550 mL)   |                  |                  |
| <i>Recommended oil change interval:</i>  | 5,000 hours  |                  |                  |
| <i>Warranty:</i>                         | Two years on drive, one year on liquid end   |                  |                  |
| <i>Factory testing:</i>                  | <b>Each pump is tested for rated flow at maximum pressure.</b>   |                  |                  |
| <i>Industry Standard:</i>                | CE approved, CSA available (standard in Canada), NSF/ANSI 61   |                  |                  |

### Sigma 2 Diaphragm:

|   |  |                              |                                   |
|---|--|------------------------------|-----------------------------------|
| <i>Diaphragm materials:</i>                 | PTFE faced EPDM with Nylon reinforcement and steel core  |                              |                                   |
| <i>Liquid end options:</i>                  | Polyvinylidene Fluoride (PVDF) or 316 SS, with PTFE seals  |                              |                                   |
| <i>Check valves:</i>                        | Single ball check, PVDF and SS versions.<br>Optional springs available in Hastelloy C  |                              |                                   |
| <i>Repeatability:</i>                       | When used according to the operating instructions, better than ±2%   |                              |                                   |
| <i>Max. fluid operating temperatures:</i>   | Material   | Constant (Max. Backpressure) | Short Term (15 min. @ max.30 psi) |
|   | PVDF   | 149°F (65°C)                 | 212°F (100°C)                     |
|   | 316 SS   | 194°F (90°C)                 | 248°F (120°C)                     |
| <i>Diaphragm failure indication:</i>        | Visual indicator is mandatory. The delivery unit has a patented multilayer safety diaphragm as standard and a visual diaphragm rupture indicator.  |                              |                                   |
| <i>Separation of drive from liquid end:</i> | An air gap with secondary safety diaphragm separates the drive from the liquid end to prevent cross contamination of oil and process fluid (with or without diaphragm failure indication). |                              |                                   |
| <i>Max. solids size in fluid:</i>           | 0.3 mm   |                              |                                   |
| <i>Stroke length adjustment:</i>            | Manual, in increments of 0.5%. Motorized stroke length adjustment is available.  |                              |                                   |

Certified to  
NSF/ANSI 61

### Sigma 2 Packed Plunger:

|   |   |               |               |
|---|---|---------------|---------------|
| <i>Piston materials:</i>                  | Ceramic oxide; packing rings of PTFE, packing spring of 316 SS.             |               |               |
| <i>Liquid end options:</i>                | 316 SS with PTFE seals  |               |               |
| <i>Check valves:</i>                      | Double ball, stainless steel; optional springs (Hastelloy C4).              |               |               |
| <i>Repeatability:</i>                     | When used according to the operating instructions, better than ±0.5%        |               |               |
| <i>Max. fluid operating temperatures:</i> | Material  | Constant      | Short Term    |
|   | 316 SS  | 392°F (200°C) | 428°F (220°C) |
| <i>Stroke length adjustment:</i>          | Manual, in increments of 0.2%. Motorized stroke length control is optional. |               |               |

# ProMinent® Sigma X: Sigma/2 Motor Diaphragm Metering Pumps

## Specifications (S2Ba and S2Cb) Cont.

### Sigma 2 Basic Version

|  |   |
|--|---|
| <i>Motor mounting flange:</i>                                    | Fits all NEMA 56C frame motors (motor not included with pump) |
| <i>Gear ratios and stroke frequencies (with 1725 RPM motor):</i> | 20:1 = 87 SPM, 11:1 = 158 SPM, 7.25:1 = 238 SPM               |
| <i>Motor coupling:</i>   | Flexible coupling included with pump                          |
| <i>Required Motor HP:</i>  | 1/3 HP (0.25 kW)  |
| <i>Full load RPM:</i>  | 1750 RPM (60 Hz)  |
| <i>Stroke sensor (optional):</i>                                 | Hall effect - requires 5 VDC                                  |

### Sigma 2 Control Version

|  |  |
|--|--|
| <i>Control Function:</i>                         | At stroke frequencies equal to or greater than 33%, the integral AC variable frequency drive continuously varies the motor speed in a linear response to the incoming signal. At stroke frequencies less than 33%, the motor starts and stops according to a control algorithm to provide the desired stroke frequency. In the start-stop mode the motor speed is constant at approximately 580 RPM. |
| <i>Enclosure rating:</i>                         | IP 65  |
| <i>Pump power requirements:</i>                  | 1ph, 115V-230V, 50/60 Hz (internally converted to drive below motor)   |
| <i>Motor data:</i>                               | Totally enclosed, fan cooled (IP55); class F insulation; Manufacturer ATB; 0.25 kW (0.33 HP) 230 3 phase (1.2 A, 1690 rpm)   |
| <i>Relay load</i>                                |  |
| <i>Fault relay only (Option 1):</i>              | Contact load: 250 VAC, 8 A, 50/60 Hz<br>Operating life: > 200,000 switch functions   |
| <i>Fault relay with pacing relay (Option 3):</i> | <b>Fault Relay</b><br>Contact load: 24 V, 8 A, 50/60 Hz<br>Operating life: > 200,000 switch functions<br><b>Pacing relay</b><br>Residual impedance in ON-position ( $R_{DSOn}$ ): < 8 Ω<br>Residual current in OFF-position: <1µA<br>Maximum voltage: 24 VDC<br>Maximum current: < 100 mA (for pacing relay)<br>Switch functions: $750 \times 10^6$<br>Contact closure: 100 ms (for pacing relay)    |
| <i>Air Humidity</i>                              | Max. air humidity*: 95% rel. humidity<br>* non-condensing  |
| <i>Fuse:</i>                                     | Internal, 6.3 AT - (1.5 kA)  |
| <i>Analog output signal:</i>                     | Max. impedance 300 Ω<br>Isolated 4-20 mA output signal   |
| <i>Bus interface options available:</i>          | CANopen, PROFIBUS DP   |
| <i>Relay cable (optional):</i>                   | 6 feet (2 m) 3 wire (SPDT) 250 VAC, 2 A  |
| <i>Pulse contact/remote pause contact:</i>       | With voltage-free contact, or semiconductor sink logic control (not source logic) with a residual voltage of <700 mV. The contact load is approximately 0.5 mA at + 5 VDC. (Note: Semiconductor contacts that require >700 mV across a closed contact should not be used.)   |
| <i>Contact input max. pulse frequency:</i>       | 25 pulses/sec  |
| <i>Contact input impedance:</i>                  | 10 kOhm  |
| <i>Max. pulse memory:</i>                        | 65,535 pulses  |
| <i>Necessary contact duration:</i>               | 20ms   |
| <i>Analog - current input burden:</i>            | Approximately 120 Ohm  |
| <i>Max. allowable input current:</i>             | 50 mA  |
| <i>Input power requirements:</i>                 | single phase, 115-230 VAC  |

# ProMinent® Sigma/ 2 HK Plunger Metering Pumps

## Overview: Sigma/2 HK

### Ideal for high pressure applications requiring significant turndown

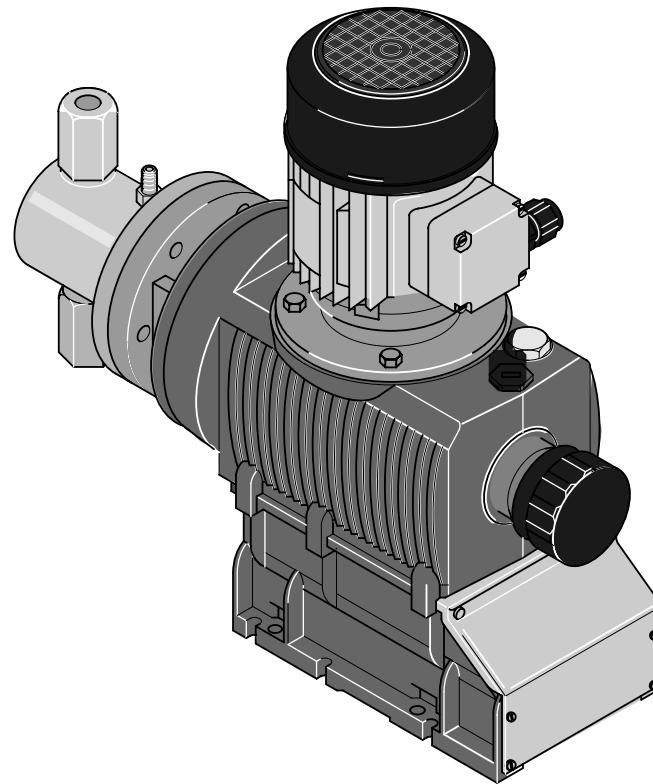

The ProMinent® Sigma/ 2 HK is a motor driven plunger metering pump has a high strength metal-lined housing for those components subject to load, and an additional plastic housing to protect against corrosion. It has a capacity range of 15.9-111.0 gph (60-420 l/h) at a maximum back pressure of 174-4,640 psi (12-320 bar). The pump capacity is adjusted by varying the stroke length 0.2 in (5 mm) in .2% increments via a self-locking adjusting knob.

The reproducible metering accuracy is better than  $\pm 1\%$  providing installation has been correctly carried out, and in the stroke length range of 10-100%. (Instructions in the operating instructions manual must be followed.) The stable, corrosion resistant metal and plastic housing is rated IP 65. To facilitate adaptation of the pumps to the widest possible range of processing requirements we offer a choice of three gearbox ratios, three liquid end sizes, two liquid end materials. For safety reasons, all motor-driven metering pumps must be equipped with adequate protection against electrical overload.

### Sigma/ 2 HK Basic Type (S2Ba)

The ProMinent® Sigma Basic type is a motor-driven metering pump with no internal electronic control system. The ProMinent® S1Ba has a number of different drive options, including the single phase AC motor or a 3 phase motor.

Different flanges are available so that customers can use their own motor to drive the pump.

## Specifications

### General:

|   |   |
|---|---|
| <i>Maximum stroke length:</i>             | 0.6" (15 mm) HK   |
| <i>Stroke frequency control:</i>          | S2Ba: Constant speed or optional DC/SCR drive or AC inverter  |
| <i>Materials of construction</i>          |   |
| <i>Inner casing:</i>                      | Cast aluminum   |
| <i>Housing:</i>                           | Glass-filled Luranyl™ (PPE)   |
| <i>Drive:</i>                             | Cam and spring-follower (lost motion)   |
| <i>Lubrication:</i>                       | Oil lubricated  |
| <i>Recommended oil:</i>                   | ISO VG 460, such as Mobil Gear Oil 634  |
| <i>Oil quantity:</i>                      | Approximately 0.6 quart (550 ml)  |
| <i>Recommended oil change interval:</i>   | 5,000 hours   |
| <i>Warranty:</i>                          | Two years on drive, one year on liquid end  |
| <i>Factory testing:</i>                   | <b>Each pump is tested for rated flow at maximum pressure.</b>  |
| <i>Industry Standard:</i>                 | CE approved, CSA available (standard in Canada)   |
| <i>Piston materials:</i>                  | Ceramic oxide; packing rings of PTFE, packing spring of 316 SS  |
| <i>Liquid end options:</i>                | 316 SS with PTFE seals  |
| <i>Check valves:</i>                      | Double ball, stainless steel; optional springs.   |
| <i>Repeatability:</i>                     | When used according to the operating instructions, better than ±0.5%  |
| <i>Max. fluid operating temperatures:</i> | <b>Material      Constant      Short Term</b><br>316 SS      392°F (200°C)      428°F (220°C)   |
| <i>Stroke length adjustment:</i>          | Manual, in increments of 0.2%.<br>Motorized stroke length control is optional.  |
| <i>Motor mounting flange:</i>             | Fits all NEMA 56C frame motors (motor not included with pump)<br>Gear ratios and stroke frequencies<br>(with 1725 RPM motor): 20:1 = 87 SPM, 11:1 = 156 SPM, 7.25:1 = 232 SPM |
| <i>Motor coupling:</i>                    | Flexible coupling included with pump.   |
| <i>Required Motor HP:</i>                 | 1/3 HP (.25 kW)   |
| <i>Full load RPM:</i>                     | 1750 RPM (60 Hz)  |
| <i>Stroke sensor (optional):</i>          | Hall effect - requires 5 VDC  |

# ProMinent® Sigma X: Sigma/3 Motor Diaphragm Metering Pumps

## Overview: Sigma/ 3 (S3Cb)

The Sigma/3 motor diaphragm metering pumps are produced with a high-strength metal inner housing for parts subject to load as well as an additional plastic housing to protect against corrosion. The capacity range extends from 46 to 274.7 gph (174 - 1040 l/h) and pressures up to 174 psig (12 bar). Stroke length is 0.24 in.

Under defined conditions and when installed correctly, the reproducibility of the metering is better than  $\pm 2\%$  at a stroke length of between 30 % and 100 % (instructions in the operating instructions manual must be followed).

In all motor-driven metering pumps without integrated overload protection, for safety reasons, suitable overload protection must be provided during installation. (see [page 148](#) for spare parts)

## Sigma/ 3 Basic Type (S3Ba)

The Sigma/ 3 basic type is a motor-driven metering pump without internal electronics. Various NEMA 56C frame motors can be used depending upon the application requirements. The Sigma 3 Basic pump is also suitable for use with inverter duty and DC motors for varying flow requirements.

# ProMinent® Sigma X: Sigma/3 Motor Diaphragm Metering Pumps

## Sigma/ 3 control type (S3Cb)

For optional control via contact or analog signals (e.g. 0/4 - 20 mA) the Sigma control type pump results in good adaptability, even in fluctuating metering requirements.

The microprocessor control is an optimum combination of speed control and stop & go operation, i.e. it works in a wide control field with customized fine adjustment. Moreover it enables an optimum metering result thanks to the metering behavior of the metering pump being matched to the chemicals or application.

The control system measures the movement and speed profile in conjunction with the power demand. This leads to a real reduction in the actually required power, which means an increase in efficiency.

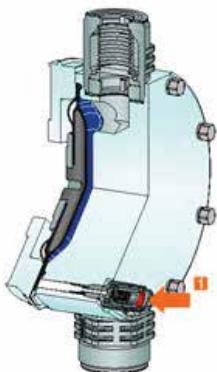

## Detachable operating unit (HMI)

The operating unit (HMI) can be attached directly to the metering pump or mounted on the wall alongside the pump or completely removed. This provides the operator with a wide range of options for the integration of a metering system into the overall system that it is readily accessible and easy to use. Moreover, the removable operating unit offers additional protection against unauthorized operation of the metering pump or against changing of the pump settings.

The Sigma X features a NEW removable HMI control unit with innovative click-wheel and 4 operating buttons. An illuminated LCD display provides information about the relevant operating status. LEDs on the operating unit and the control unit indicate the active pump functions or the pump status.

## Diaphragm rupture warning system

The liquid end has a patented multilayer safety diaphragm as standard and a visual diaphragm rupture indicator.

The diaphragm is coated on both sides with PTFE film. This coating ensures that no leakage to the outside occurs even if the diaphragm ruptures. If the diaphragm ruptures, feed chemical enters between the diaphragm layers and thus triggers a mechanical indication or an alarm via the sensor area. This concept ensures reliable metering - even under critical operating conditions.

### Metering profiles

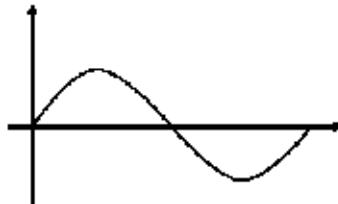

Diagram 1: Discharge stroke, suction stroke equal

Metering profiles ensure optimum metering results, thanks to the metering behavior of the metering pump being matched to the chemicals or application.

The stroke movement of the diaphragm pump is continuously measured and controlled, so that the stroke is executed according to the desired metering profile. The pump can be operated in normal mode (**Diagram 1**), with optimized discharge stroke (**Diagram 2**) or with optimized suction stroke (**Diagram 3**). Three typical metering profiles are shown schematically with the behavior over time.

In normal operating mode the time behavior for the suction stroke and the discharge stroke is similar (**Diagram 1**). In the mode with optimized discharge stroke (**Diagram 2**) the discharge stroke is lengthened while the suction stroke is executed as quickly as possible. This setting is, for example, useful for applications that require optimum mixing behavior and optimized chemical mixing.

In the mode with the optimized suction stroke (**Diagram 3**), the suction stroke is carried out as slowly as possible, which permits precise and trouble-free metering of viscous and gaseous media. This setting should also be chosen to minimize the NPSH value.

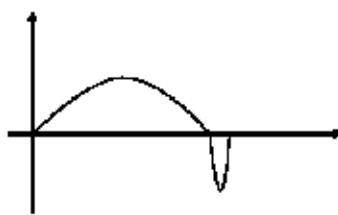

Diagram 2: long discharge stroke, short suction stroke

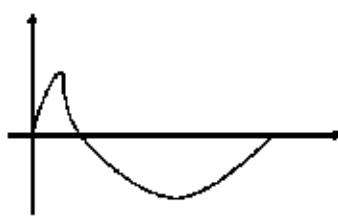

Diagram 3: short discharge stroke, long suction stroke

| Lubrication:                         | Oil lubricated   |                                 |                                      |                        |
| Recommended oil:                     | ISO VG 460, such as Mobil Gear Oil 634s  |                                 |                                      |                        |
| Oil quantity:                        | Approximately 0.95 quart (900 mL)  |                                 |                                      |                        |
| Recommended oil change interval:     | 5,000 hours  |                                 |                                      |                        |
| Warranty:                            | Two years on drive, one year on liquid end.  |                                 |                                      |                        |
| Factory testing:                     | <b>Each pump is tested for rated flow at maximum pressure.</b>   |                                 |                                      |                        |
| Industry Standard:                   | CE approved, CSA available (standard in Canada), NSF/ANSI 61   |                                 |                                      |                        |
| Diaphragm materials:                 | PTFE faced EPDM with Nylon reinforcement and steel core  |                                 |                                      |                        |
| Liquid end options:                  | Polyvinylidene Fluoride (PVDF) or 316 SS with PTFE   |                                 |                                      |                        |
| Check valves:                        | DN 25 valves - Single ball check, PVDF and SS versions.<br>Optional springs available (Hastelloy C4)<br>DN 32 valves - Plate valves, with Hastelloy C4 plates and springs in both PVDF and SS valves.                |                                 |                                      |                        |
| Repeatability:                       | When used according to the operating instructions, better than ±2%   |                                 |                                      |                        |
| Max. fluid operating temperatures:   | Material   | Constant<br>(Max. Backpressure) | Short Term<br>(15 min. @ max.30 psi) | Minimum<br>temperature |
|                                      | PVDF   | 149°F (65°C)                    | 212°F (100°C)                        | 14°F (-10°C)           |
|                                      | 316 SS   | 194°F (90°C)                    | 248°F (120°C)                        | 14°F (-10°C)           |
| Diaphragm failure indication:        | Visual indicator is mandatory. The delivery unit has a patented multilayer safety diaphragm as standard and a visual diaphragm rupture indicator.  |                                 |                                      |                        |
| Separation of drive from liquid end: | An air gap with secondary safety diaphragm separates the drive from the liquid end to prevent cross contamination of oil and process fluid (with or without optional diaphragm failure indication).                  |                                 |                                      |                        |
| Max. solids size in fluid:           | 0.3 mm   |                                 |                                      |                        |
| Stroke length adjustment:            | Manual, in increments of 0.5%. Motorized stroke length adjustment available.   |                                 |                                      |                        |

NSF/ANSI 61

# ProMinent® Sigma X: Sigma/3 Motor Diaphragm Metering Pumps

## Specifications (S3Ba and S3Cb) Cont.

### Basic Version

|   |   |
|---|---|
| Motor mounting flange:                                    | Fits all NEMA 56C frame motors (motor not included with pump) |
| Gear ratios and stroke frequencies (with 1725 RPM motor): | 20:1 = 86 SPM, 14:1 = 124 SPM, 10.1:1 = 173 SPM               |
| Motor coupling:   | Flexible coupling included with pump.                         |
| Required Motor HP:  | 3/4 HP (.55 kW)   |
| Full load RPM:  | 1750 RPM (60 Hz)  |
| Stroke sensor (optional):                                 | Hall effect - requires 5 VDC                                  |

### Control Version

|  |  |
|--|--|
| <i>Control Function:</i>                         | At stroke frequencies equal to or greater than 33%, the integral AC variable frequency drive continuously varies the motor speed in a linear response to the incoming signal. At stroke frequencies less than 33%, the motor starts and stops according to a control algorithm to provide the desired stroke frequency. In the start-stop mode the motor speed is constant at approximately 580 RPM.   |
| <i>Enclosure rating:</i>                         | IP 65  |
| Pump power requirements:                         | 1ph, 115V-230V, 50/60 Hz (internally converted to drive below motor)   |
| <i>Motor data:</i>                               | Totally enclosed, fan cooled (IP55); class F insulation; Manufacturer ATB; 0.55 kW (0.75 HP) 230 3 phase (2.5 A, 1710 rpm)   |
| <i>Relay load</i>                                |  |
| <i>Fault relay only (Option 1):</i>              | Contact load: 250 VAC, 8 A, 50/60 Hz<br>Operating life: > 200,000 switch functions   |
| <i>Fault relay with pacing relay (Option 3):</i> | <b>Fault Relay</b><br>Contact load: 24 V, 100 mA, 50/60 Hz<br>Operating life: > 200,000 switch functions<br><b>Pacing relay</b><br>Residual impedance in ON-position ( $R_{DSon}$ ): < 8 Ω<br>Residual current in OFF-position: <1µA<br>Maximum voltage: 24 VDC<br>Maximum current: < 100 mA (for pacing relay)<br>Switch functions: $750 \times 10^6$<br>Contact closure: 100 ms (for pacing relay)<br>Max. air humidity*: 95% rel. humidity<br>* non-condensing<br>Internal, 6.3 AT - (1.5 kA) |
| <i>Analog output signal:</i>                     | Max. impedance 300 Ω<br>Isolated 4-20 mA output signal   |
| <i>Bus interface options available:</i>          | CANopen, PROFIBUS DP   |
| <i>Relay cable (optional):</i>                   | 6 feet (2 m) 3 wire (SPDT) 250 VAC, 2 A  |
| <i>Pulse contact/remote pause contact:</i>       | With voltage-free contact, or semiconductor sink logic control (not source logic) with a residual voltage of <700 mV. The contact load is approximately 0.5 mA at + 5 VDC. (Note: Semiconductor contacts that require >700 mV across a closed contact should not be used.)   |
| <i>Contact input max. pulse frequency:</i>       | 25 pulses/sec  |
| <i>Contact input impedance:</i>                  | 10 kOhm  |
| <i>Max. pulse memory:</i>                        | 65,535 pulses  |
| <i>Necessary contact duration:</i>               | 20ms   |
| <i>Analog - current input burden:</i>            | Approximately 120 Ohm  |
| <i>Max. allowable input current:</i>             | 50 mA  |
| <i>Input power requirements:</i>                 | single phase, 115-230 VAC  |

# ProMinent® ProMus Hydraulic Diaphragm Metering Pumps

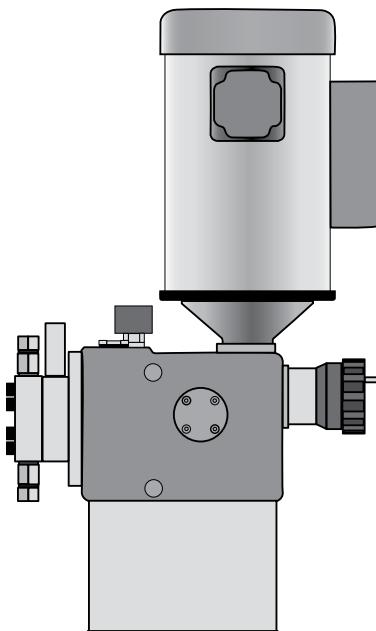

## Overview: ProMus

### High pressure chemical process metering (see page 149 for spare parts)

The ProMus is a motor driven metering pump with a hydraulically actuated diaphragm. The drive case and the hydraulic unit are filled with a liquid that functions as a hydraulic coupling. A plunger connects the drive case with the hydraulic unit. The dosing diaphragm separates the hydraulic part of the pump from the dosing unit. The movement of the diaphragm depends on the amount of liquid displaced by the plunger.

### ProMus Design Specifications

The ProMinent ProMus is a motor driven metering pump incorporating a hydraulically balanced Teflon diaphragm. The drive case is cast iron incorporating a worm gear set (5 Ratios available) driving a rotating eccentric. The locking stroke adjuster varies the flow from 100% to 0% in 1% increments. The pump is built in accordance to API 675 standards. The hydraulic system transfers the rotating eccentric motion to diaphragm movement by way of a reciprocating plunger (8 plunger diameters available). The plunger and diaphragm are hydraulically coupled (no mechanical connection). Coupling compliance is precisely controlled by a mechanically actuated replenishment valve, which senses diaphragm position to admit coupling fluid as required. The coupling fluid is automatically degassed to maintain accuracy and drive case is protected from overload by a simple acting relief valve. The hydraulic system is separated from the fluid end by a Teflon diaphragm completely isolating the pumped fluid from the surroundings. The liquid end is currently available in PVDF, Stainless Steel, Hastelloy C and Alloy 20.

### ProMus Benefits

- Flow rates from 0.23 gph (0.87 L/h) to 101 gph (382 L/h) and Pressures up to 3500 psi (241 bar)
- Hydraulically actuated diaphragm ensuring a sealed pumping system for corrosive or toxic chemicals with superior leak protection
- Built in accordance to API 675 standards suitable for heavy industrial applications and specifications
- Robust cast iron drive construction ideal for applications such as boiler feeds, catalyst feed, dye injection and petrochemicals
- Flexible design for a wide range of applications including water treatment and high pressure chemical refining
- Fast and easy field maintenance with minimal downtime

| Required Motor HP:         | 1/2 HP (if 12.5:1 gear is selected 3/4 hp might be used)   |
| Full load RPM:             | 1725   |
| Drive:                     | Uses a hydraulic piston and mechanically actuated Oil replenishment valve to transfer the reciprocating Motion to a flat Teflon diaphragm                                      |
| Gear ratios:               | 5 gear ratios; 12.5:1, 15:1, 30:1, 40:1, 50:1*, 100:1*   |
| Note:                      | minimum stroke rate is 18 spm  |
| Motor mounting flange:     | Fits all NEMA 56 C frame motors<br>(Optional IEC 71 with B5 flange)  |
| Motor coupling:            | Direct coupled to worm gear shaft  |
| Check valves:              | PVDF/PTFE: size 17 double inlet & outlet; sizes 30/40 single inlet & outlet  |
| Metal:                     | 1) single inlet & outlet<br>2) double inlet & outlet<br>3) single inlet & double outlet<br>(Double ball needed for pressures over 500 psi)                                     |
| Repeatability:             | Steady state flow accuracy is +/- 1% over turndown<br>Ratio of 10:1  |
| Max fluid operating temp:  | constant: 195 F (90 C) short term 250 F (120 C)  |
| Max solids size :          | 0.3mm; if larger than this provisions must be made to remove them prior  |
| to suction inlet           |  |
| Max viscosity:             | 200 mPas   |
| Recommend oil:             | Mobilube SCH 75w-90  |
| Oil quantity:              | 1.5 quart (1.42 l)   |
| Oil change interval:       | Every 5000 hours   |
| Stroke length adjustment:  | Manual adjustment.<br>Automatic stroke length adjustment via 4 to 20 mA available as an option<br>Integrated pressure relief to protect pump. External pressure relief must be |
| Pressure relief:           |  |
| used to protect system     |  |
| Warranty:                  | 2 years on drive, 1 year on liquid end   |
| Factory testing:           | each pump is tested for capacity at rated pressure   |
| Maximum inlet pressure:    | 14.5 psi (1 bar)   |

\*50:1 and 100:1 are not available for 50 Hz operation

# ProMinent® Hydro/ 2 API 675 Hydraulic Diaphragm Metering Pumps

## Overview: Hydro/ 2 API 675 (HA2a)

**For flexible metering with excellent process reliability in the medium pressure range.**

**Capacity range of single pump: 1.85 - 24.0 gph; 145.0 - 1450.4 psi**

As the new member of the Hydro product range, the hydraulic diaphragm metering pump Hydro/ 2 API 675 (HA2a) meets the requirements of API 675. The pumps stand out on account of their full-motion drive and automatic bleeding. There are a variety of drives, including some for use in areas at risk from explosion.

### Your benefits:

Excellent process safety and reliability:

- PTFE multi-layer diaphragm with integral diaphragm rupture warning system
- Integral hydraulic relief valve
- Metering reproducibility is better than  $\pm 1\%$  within the 20-100% stroke volume range under defined conditions and with proper installation

### Excellent flexibility:

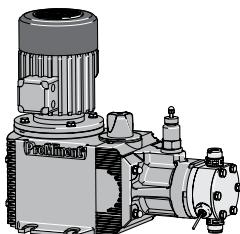

- The modular construction with single and double head versions permits a wide range of applications, with the double head designs being operated in push-pull mode
- It is possible to combine up to 5 metering units, even with different pump capacities, in multiple pump systems
- 5 different gear ratios are available

### Technical Details:

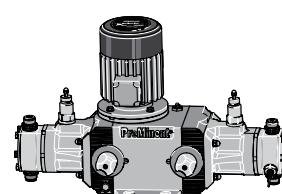

- Stroke length: 15 mm, Rod force: 2,000 N
- Stroke volume adjustment range: 0 – 100%
- Stroke volume adjustment: manually by scaled rotary dial (optionally with electric actuator or control drive)
- Metering reproducibility is better than  $\pm 1\%$  in the 20 to 100% stroke volume range under defined conditions and with correct installation
- PTFE multi-layer diaphragm with electric diaphragm rupture warning system via a contact
- Integrated hydraulic relief and bleed valve
- Wetted materials: PVDF, PTFE+25% carbon, stainless steel 1.4571, Hastelloy C.
- A wide range of power end versions is available: three-phase standard or 1-phase AC motor, motors for use in Exe and Exde areas, different flange designs for use in customer-specific motors
- Degree of protection: IP 55, ISO Class F
- Design in compliance with API 675 among others

### Field of application:

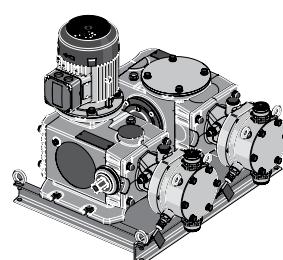

- Oil and gas industry
- Volume-proportional metering of chemicals/additives in the treatment of boiler feed water
- Metering of reactants and catalysts in the chemical industry
- Level-dependent metering of auxiliary agents in industrial production engineering, for instance hot wax metering in the production of adhesive strips

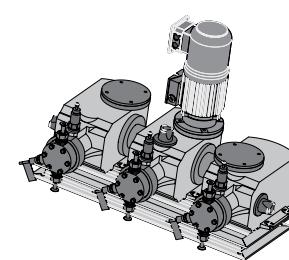

Hydro pump

Hydro double head pump

Hydro externally mounted pump

Hydro triplex pump

# ProMinent® Hydro/ 2 API 675 Hydraulic Diaphragm Metering Pumps

1-SPECIFIC FLOW RATE AND PRESSURE MUST BE PROVIDED UPON ORDER

\* Liquid end PVDF version Max. 363 psi (25 bar)

The permitted design of the rate flow is possible in the stated range with pump selection in accordance with API 675 (adjustment range 1:10).

Example: Considering plunger 16 mm, pressure 25 bar (363 psi) and stroke rate 180 stroke/min gives (4.4) – 5.5 gph; the adjustment range of 1:10 is met for a flow rate between 4.4 and 5.5 gph.

\*Version SST with double ball valve, valve connector on suction-pressure with female thread Rp 1/4 and external thread G 3/4 - DN 10

Spare part set includes:

S1/H1 1 spare diaphragm cpl., 1 set of seals, 2 valve balls, (4 valve balls for version with double ball valves)

P1 1 spare diaphragm cpl., 1 suction valve cpl., 1 discharge valve cpl., 2 valve balls, 1 set of seals

# ProMinent® Hydro/ 3 API 675 Hydraulic Diaphragm Metering Pumps

## Overview: Hydro/ 3 API 675 (HA3a)

**For flexible metering with excellent process reliability in the medium pressure range.**

**Capacity range of single pump: 3.96 – 53.0 gph, 145 – 1450.4 psi**

The hydraulic diaphragm metering pump Hydro/ 3 API 675 (HA3e) meets the requirements of API 675, among other things due to its full-motion drive and automatic bleeding. Some of the many drive options are also approved for use in areas at risk from explosion.

### Your benefits:

Excellent process safety and reliability:

- PTFE multi-layer diaphragm with integral diaphragm rupture warning system
- Integral hydraulic relief valve
- Metering reproducibility is better than  $\pm 1\%$  within the 20-100% stroke volume range under defined conditions and with proper installation

### Excellent flexibility:

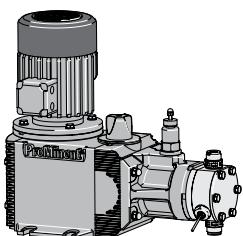

- The modular construction with single and double head versions permits a wide range of applications, with the double head designs being operated in push-pull mode
- It is possible to combine up to 5 metering units, even with different pump capacities, in multiple pump systems
- 5 different gear ratios are available
- Customized designs are available on request

### Technical Details:

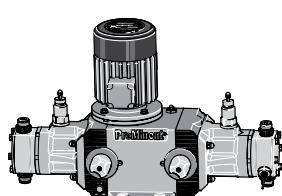

- Stroke length: 15 mm, Rod force: 4,200 N
- Stroke volume adjustment range: 0 – 100%
- Stroke volume adjustment: manually by scaled rotary dial (optionally with electric actuator or control drive)
- Metering reproducibility is better than  $\pm 1\%$  in the 20 – 100% stroke volume range under defined conditions and with correct installation
- PTFE multi-layer diaphragm with electrical diaphragm rupture warning system via a contact
- Integrated hydraulic relief and bleed valve
- Wetted materials: PVDF, PTFE+25% carbon, stainless steel 1.4571, Hastelloy C.
- A wide range of power end versions is available: three-phase standard or 1-phase AC motor, motors for use in Exe and Exde areas, different flange designs for use in customer-specific motors
- Degree of protection: IP 55 (standard) ISO Class F
- Design in compliance with API 675 among others

### Field of application:

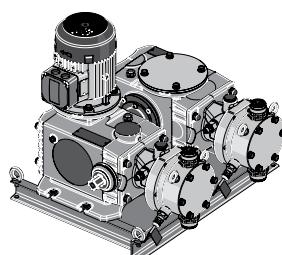

- Oil and gas industry.
- Volume-proportional metering of chemicals/additives in the treatment of boiler feed water
- Metering of reactants and catalysts in the chemical industry
- Level-dependent metering of auxiliary agents in industrial production engineering, for instance hot wax metering in the production of adhesive strips

1-SPECIFIC FLOW RATE AND PRESSURE MUST BE PROVIDED UPON ORDER

\* Liquid end PVDF version Max. 363 psi (25 bar)

The permitted design of the rate flow is possible in the stated range with pump selection in accordance with API 675 (adjustment range 1:10).

Example: Considering plunger 16 mm, pressure 25 bar (363 psi) and stroke rate 180 stroke/min gives (4.4) – 5.5 gph; the adjustment range of 1:10 is met for a flow rate between 4.4 and 5.5 gph.

## Materials In Contact With Chemicals

\*Version SST with double ball valve, valve connector on suction-pressure with female thread Rp 1/4 and external thread G 3/4 - DN 10

Spare part set includes:

S1/H1 1 spare diaphragm cpl., 1 set of seals, 2 valve balls, (4 valve balls for version with double ball valves)

P1 1 spare diaphragm cpl., 1 suction valve cpl., 1 discharge valve cpl., 2 valve balls, 1 set of seals

# ProMinent® Makro TZ Diaphragm Metering Pumps

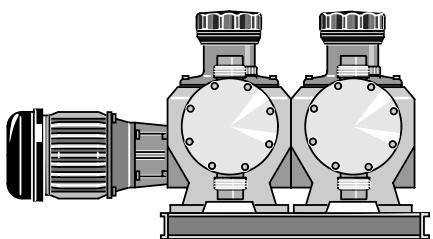

## Overview: Makro TZ

**Ideal for high volume and high pressure applications**  
(see [page 150](#) for spare parts)

The ProMinent® Makro TZMb is a mechanically or hydraulically actuated motor driven diaphragm metering pump.

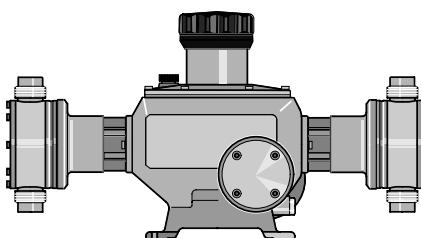

The stroke length can be adjusted by means of the shift ring mechanism from 0-10 mm (TZMb), with 0.5 % accuracy. The 5-speed gearbox is encased in a cast, seawater resistant, acrylic resin lacquered housing. Liquid ends are available in different material combinations to suit differing applications. The suction lift varies according to the density and viscosity of the medium, the dimension of the pipework and the pump stroke rate. Reproducibility of metering is better than  $\pm 2\%$  in the stroke length range from 30 % -100 % subject to defined conditions and correct installation. (You must follow the instructions in the operating instruction manual).

pk\_2\_013

### ProMinent® Makro TZ TZMbA Add-On Pumps

The ProMinent® Makro TZ main diaphragm metering pump can be converted to a duplex or triplex pump with the ProMinent® Makro TZ add-on diaphragm pump (several add-on pumps can be operated at reduced back pressure). Multiplex pumps can also be retrofitted by the operator; all the necessary components and fittings are included with the TZMbA. Different stroke rates can be achieved with the add-on pump independently of the main pump as each TZMbA has its own reducing gear. The main power end can be fitted for this purpose with a more powerful drive motor. A base frame is required when using add-on power ends.

pk\_2\_014

### ProMinent® Makro TZ Double Head Version TZMbD/TZMbB

The double head version of the ProMinent® Makro TZ is similar to the simplex pump. It is, however, fitted with a second liquid end.

The liquid ends work in push-pull mode by means of a coupling element in the gearbox.

Stroke length 10 mm

The admissible priming pressure on the suction side is 50 % of the maximum back pressure.

(Note: Capacities and suction lift refer to pumps tested on water at 115 VAC, 60 Hz, and an ambient temperature of 70°F (20°C). Higher specific gravity fluids will reduce suction lift. Capacities will be slightly reduced from published ratings if pumps are skid mounted).

Multi-layer safety diaphragm with PTFE coating.

\*\* The valve spring is coated with CTFE (similar to PTFE)

Custom designs available to order.

# ProMinent® DULCOFLEX Series

## Peristaltic Metering Pumps

### Overview: DULCOFLEX - DFXa

The **DULCOFLEX - DFXa** is an intelligent peristaltic metering pump that is valve-free and has the accuracy of a diaphragm pump. Applications include gaseous, highly viscous, abrasive, shear-sensitive and chemically aggressive fluids.

The liquid end of the pump is designed for a quick and simple replacement of the tubing, utilizing a unique exchange process. The pump display provides precise instructions on the steps required for the tube replacement. High-preformance tubing consists of a **TPV (Santoprene)** or **PUR (Polyurethane)** material that provides excellent chemical resistance and a long service life.

The **DULCOFLEX - DFXa** is powered by a DC motor and will provide continuous metering from **0.038 GPD (6 ml/h)** to **17.17 GPH (65 l/h)** and pressures up to **100 PSIG (7bar)**. Additional features such as communication protocol includes PROFIBUS, CANbus, Modbus and PROFINET are available.

#### Your benefits

- NSF61 Approved!
- Volume adjustment in GPH or LPH
- Manual, Analog, Contact and Batch modes optional
- High visibility of LED-indicator lights
- Large illuminated display
- New configurable input/output port
- CIP (cleaning in place) enabled system
- Reverse flow is possible
- Dosing head can be aligned in four directions:  
Left, Right, Up and Down
- Integrated 7-day timer
- Viscosities to 10,000 cPs

Certified to  
NSF/ANSI 61

### Tube material:

TPV (Santoprene): available with pump versions 0730 and 0530

PUR (Polyurethane): available with pump version 0518, 0530 and 0565 only

### Tube connectors: PVDF/PTFE

Metering reproducibility: ± 2% with retracted tube (after approx. 200 revolutions)

Turndown: 3,000:1

Electrical connection: 100 -230 V ± 10%, 50/60 Hz

Nominal power: approx. 45 W

Degree of protection: IP 66, NEMA 4X Indoor

Permissible ambient temperature: 14 - 113 °F

Optional relay modules: 1 x switch over contact, 230 V - 8 A or 2 x On, 24 V - 100 mA

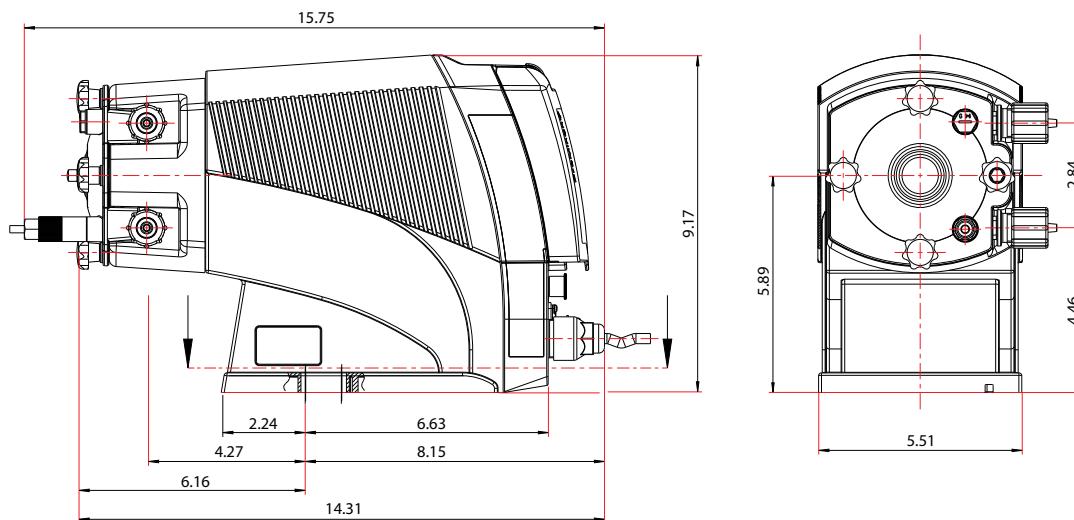

## Spare Parts

95% Relative humidity – non-condensing

#### **Sound pressure level:**

LpA < 70 dB according to EN ISO 20361

#### **Warranty:**

2 years on pump drive, 1 year on liquid end

#### **Hose insert threads:**

NP / PVT M20 x 1.5 (provided with adapters for tubing)

#### **Standard production test:**

All pumps are tested for capacity at maximum pressure prior to shipment

#### **Contact input:**

|                               |                    |
|-------------------------------|--------------------|
| <b>Minimum pulse duration</b> | 20 ms              |
| <b>Maximum pulse input</b>    | 25 pulses / second |
| <b>Analog Input Impedance</b> | 120 Ohms           |

# ProMinent® DULCOFLEX Series Peristaltic Metering Pumps

## Overview: DULCOFLEX - DFYa

The **DULCOFLEX- DFYa** metering pump adds an intelligent peristaltic offering to our established line of ProMinent pumps

This new design of peristaltic pump is controlled electronically via an HMI controller thus allowing for greater turndown in our DulcoFlex pump series. All the benefits of a peristaltic pump are retained including off-gassing fluids, high viscosity and abrasive media, and shear-sensitive liquids.

Like the DFXa, the DFYa offers simple and easy hose replacement via the HMI controller. When the hose needs replaced, the pump displays instructions for the user to step-through the replacement process.

### Your benefits

- Contact, batch, manual or analog modes
- Adjustment of the metering rate directly in gph or l/h
- Connection to process control systems via a BUS interface, such as PROFIBUS®, Profinet or CANbus
- Large illuminated display
- Pump is available as an FDA design
- No problems with very gaseous media or air locks
- Reverse flow is possible
- Viscosities to 20,000 cPs

**PROFI**  
PROCESS FIELD BUS

# ProMinent® DULCOFLEX Series Peristaltic Metering Pumps

## Capacity Data

### Capacity data: DULCOFLEX - DFYa

| Pump Version | Capacity at Maximum Backpressure GPH ±10% (L/h) ±10% | PSIG (bar) | Max. speed rpm | Connector size in | Pre-primed suct. lift ft (m) | Shipping weight lbs (kg) |
|--------------|--|------------|----------------|-------------------|------------------------------|--------------------------|
| 04410        | 108.3 (410)  | 58 (4)     | 80             | 3/4"              | 26.25 (8)                    | 66 (30)                  |
| 06410        | 108.3 (410)  | 87 (6)     | 80             | 3/4"              | 26.25 (8)                    | 66 (30)                  |
| 08410        | 108.3 (410)  | 116 (8)    | 80             | 3/4"              | 26.25 (8)                    | 66 (30)                  |

### Tube material:

NR (Natural rubber)

NBR (Nitrile rubber), NBR-A (Nitrile rubber FDA approved)

EPDM

HYPALON®

**Adjustable feed rate:** between 1.1 gph and 90.1 gph (5.1 l/h and 410 l/h)

**Pre-primed suction lift:** 26.25 ft (8 m)

**Rollers/ shoes:** Rollers

**Metering reproducibility:** ± 2% with retracted tube (after approx. 500 revolutions)

**Electrical connection:** 100 - 230 V ± 10%, 50/60 Hz

**Power consumption:** Max. 400 W

**Degree of protection:** IP 55

**Permissible ambient temperature:** 32 - 113 °F (0 - 45 °C)

**Optional relay modules:**

Fault indicating relay - 230 V AC - 8 A

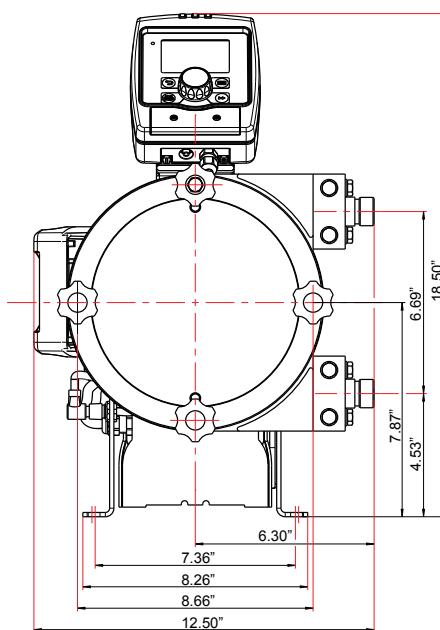

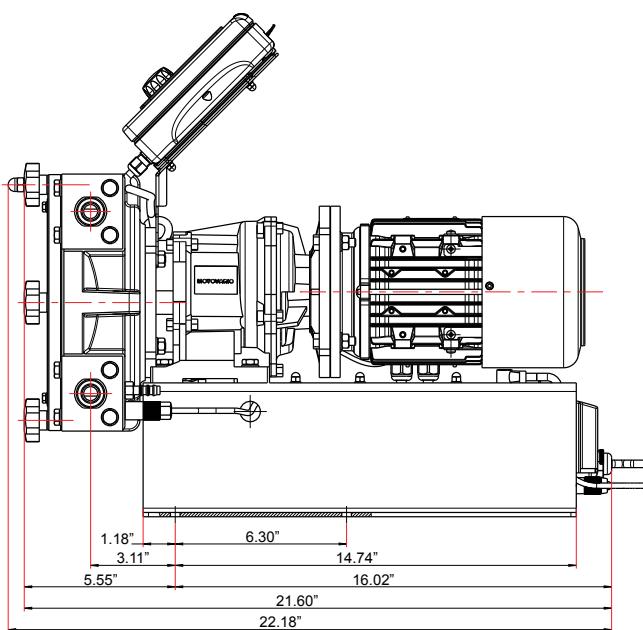

Fault indicating relay + Pacing relay - 24 V DC - 100 mA

0/4-20 mA output + fault indicating/ pacing relay - 24 V DC - 100 mA

*Capacity data represents minimum values, tested using water at 68 °F (room temperature)*

*HYPALON® is a registered trade mark of DuPont Performance Elastomers*

## Dimensional Drawings

# ProMinent® DULCOFLEX Series

## Overview: DULCOFLEX DFBU

The DULCOFLEX DFB is a versatile peristaltic pump, which incorporates both hose and tubing technology. The unique roller design offers a lubricant-free housing unlike typical shoe pumps. With pressures up to 116 psi and flow rates to 337 gph, the DFB ia a great choice for pumping difficult fluid such as slurries and abrasive chemicals.

### Feature & Benefits

- 10, 13, 16, 19, 22 mm tubing pumps (30psi)
- 10, 13, 16, 22 mm reinforced hose pumps (116psi)
- Flows to 337 gph (5.6 gpm)
- Halar coating available for the toughest chemicals
- Disaster proof hose connections
- Roller Technology - Lower hose Stress
- Easy maintenance
- Reinforced hose
- Can run dry
- Self-priming
- Great for solids
- Reversible
- No seals
- No valves

### DULCOFLEX DFB Capacities

**Models are available with one of the following reinforced hoses:**

**Natural Rubber, Buna, EPDM, Hypalon**

**\* DFB19 is not available with reinforced hoses**

# ProMinent® DULCOFLEX Series

## Overview: DULCOFLEX DFBR

The DULCOFLEX RAD pump offers a choice of tubing or a reinforced hose in about  $\frac{1}{2}$  the space needed for conventional hose pumps! Proven roller technology means no expensive fill lubricants, no required torque stabilization, and up to 30% longer hose life than comparable “pressing shoe” hose pumps. Disaster proof hose/tube fittings, flows up to 337 gph, and pressure capability up to 116 psi makes the RAD pump a great choice for pumping difficult fluids!

### Feature & Benefits

- 10, 13, 16, 19, 22 mm tubing pumps (30psi)
- 10, 13, 16, 22 mm reinforced hose pumps (116psi)
- Flows to 337 gph (5.6 gpm)
- Halar coating available for the toughest chemicals
- Disaster proof hose connections
- Roller Technology - Lower hose Stress
- Easy maintenance
- Reinforced hose
- Can run dry
- Self-priming
- Great for solids
- Reversible
- No seals
- No valves

### DULCOFLEX DFBR Capacities

# ProMinent® DULCOFLEX Series

## Overview: DULCOFLEX DFCU

The DULCOFLEX DFC is a hose pump designed for difficult pumping applications. It incorporates a roller design which eliminates the need for cumbersome lubricants, unlike typical shoe pumps. The DFC can reach pressures up to 116 psi and flow rates up to 106 gpm and is ideal for difficult industrial and municipal applications.

### Feature & Benefits

- Sizes: 30, 40, 50, 60, 70mm
- Flows to 106 gpm
- Disaster proof hose connections
- Roller Technology - Lower hose stress
- Easy maintenance
- Reinforced hose
- Can run dry
- Self-priming
- Great for solids handling
- Reversible
- No seals
- No valves

### DULCOFLEX DFCU Capacities

# ProMinent® DULCOFLEX Series

## Overview: DULCOFLEX DFDU

The DULCOFLEX DFD is a hose pump designed for pressures up to 232 psi and flow rates up to 160 gpm. The unique shoe design is made of steel for smoother and cooler compression. The DFD uses safe DulcoLube oil for the shoe lubrication. With suction lifts up to 29 feet, the DULCOFLEX DFD is a great choice for difficult pumping applications.

### Feature & Benefits

- Sizes: 25, 32, 40, 60, 70, 100mm
- Flows to 160 gpm
- Suction lifts up to 29 ft.
- Disaster proof hose connections
- DulcoLube food grade glycerin lubricant
- Designed heat sink fins for cooler operation
- Steel shoes for a smoother and cooler compression
- Run dry capabilities
