## Reliable process measurement and control

ProMinent® DULCOMETER® analyzers provide precise monitoring or controlling of process variables for water and wastewater applications. DULCOMETER® products encompass a complete range of quality instrumentation from single channel transmitters to multi-channel disinfection controllers.

ProMinent® amperometric technology surpasses many of today's colorimetric methods by providing real time, on-line measurement without reagents or buffer solutions. Process variables include free and total chlorine, fluoride, chlorine dioxide, chlorite, hydrogen peroxide, peracetic acid and ozone.

Select from single variable transmitters (DMT), single variable controllers (D1C), dual variable controllers (D2C) and multi-variable controllers (DDC). Complete the application by choosing one of our standard, pre-engineered packages which comes fully assembled including controller, sensors, sensor holder, wiring and quickstart guide.

### DULCOMETER® Type DMT

DULCOMETER® DMT transmitters are compact 2-wire transmitters for pH, redox, chlorine, conductive conductivity, and temperature parameters. They convert the primary sensor signal to a standard 4-20 mA signal, and act as an interference-proof link between the sensor and other control systems (ex: PLCs) or DULCOMETER® controllers positioned some distance away.

### DULCOMETER® Type DDC

DULCOMETER® Disinfection Controller/Monitor and DULCO®-net technology are revolutionizing measuring, control and metering technology in public water systems. The decentralized modular concept with one single central unit controls sensors and actuators for up to 16 measurement locations. Controls up to 5 process variables at a time.
