Software Version: 2.x

Safety Precautions

Be sure to read and observe the following requirements!

The DULCOMETER® 2201 X CondI is approved for operation in hazardous locations.

Warning Before connecting the device to a power supply unit, make sure that this is an associated apparatus.

Whenever it is likely that the protection has been impaired, the device shall be made inoperative and secured against unintended operation.
The protection is likely to be impaired if, for example:

- ❏ the device shows visible damage
- ❏ the device fails to perform the intended measurements
- ❏ after prolonged storage at temperatures above 70 °C
- ❏ after severe transport stresses

Before recommissioning the device, a professional routine test in accordance with EN 61010-1 must be performed. This test should be carried out at our factory.

The device shall not be used in a manner not specified by this manual.

Information on this Instruction Manual

ITALICS are used for texts which appear in the display.

Bold print is used to represent keys, e.g. **cal**.

Keys for which the functions are explained are frequently shown in the left-hand column.

Note

Notes provide important information that should be strictly followed when using the device.

Warning

Warning means that the instructions given must always be followed for your own safety. Failure to follow these instructions may result in injuries.

Mode Codes

After pressing **cal** or **conf** you can enter one of the following codes to access the designated mode:

conf, 0000: Error info
conf, 1200: Configuration
conf, 5555: Current source

cal, 0000: Cal info
cal, 1001: Zero point calibration
cal, 1015: Temp probe adjustment
cal, 1100: Cell factor calibration
cal, 1125: Input/adjustment of transfer ratio
cal, 2222: Test mode

Contents

1 Assembly

Package Contents and Unpacking

Unpack the device carefully and check the shipment for transport damage and completeness.
The package contains:

– Front unit of DULCOMETER® 2201 X CondI

– Lower case

– Short instruction sheet

– This instruction manual

– Bag containing:

①	2 sealing plugs	⑦	1 hinge pin
②	5 hexagon nuts	⑧	3 cable ties
③	3 cable glands	⑨	3 filler plugs
④	1 rubber reducer	⑩	3 gaskets
⑤	1 sealing insert	⑪	1 washer
⑥	4 enclosure screws	⑫	1 jumper

Assembly

2 Installation, Connection and Commissioning

Proper Use

DULCOMETER® 2201 X CondI is used for conductivity and temperature measurement in biotechnology, food processing, pharmaceutical, chemical and paper industry, as well as electroplating, water and waste-water treatment. It can either be mounted on site or in a control panel.

Note

DULCOMETER® 2201 X CondI is approved for operation in hazardous locations.

Overview of DULCOMETER® 2201 X CondI

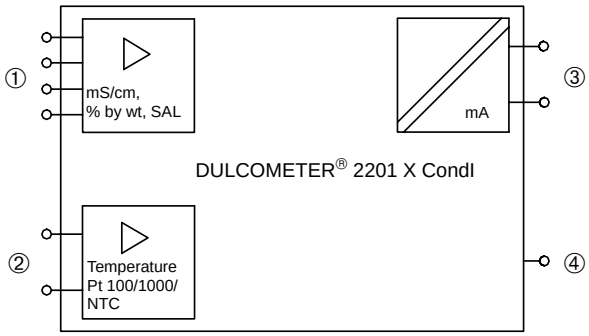

Fig. 6 System functions of DULCOMETER® 2201 X CondI

② Input for temperature probe
③ Current loop 4 – 20 mA
④ Equipotential bonding

Terminal Assignment

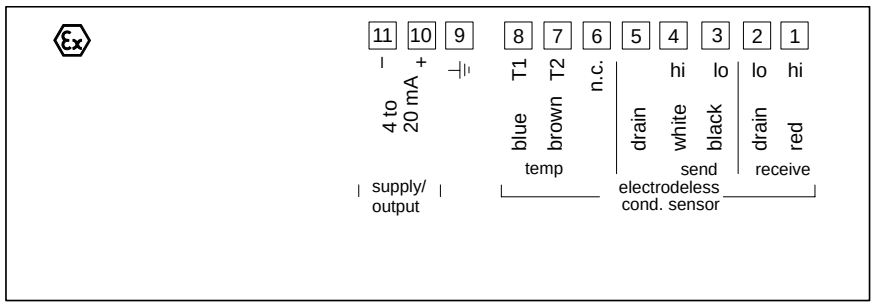

Fig. 7 Terminal assignment of DULCOMETER® 2201 X CondI

Installation and Commissioning

Warning

Installation and commissioning of the DULCOMETER® 2201 X CondI may only be carried out in accordance with this instruction manual and per applicable local and national codes. Be sure to observe the technical specifications and input ratings.

Warning

Do not use alternating current or mains power supply!

Warning

DULCOMETER® 2201 X CondI may only be connected to an explosion-proof power supply unit (for input ratings refer to schedule of Type Examination Certificate).

Warning

When commissioning, a complete configuration must be carried out.

For easier installation, the terminal strips are of a plug-in design. The terminals are suitable for single wires and flexible leads up to 2.5 mm^2 (AWG 14) (see Pg. 9).
A connection example is shown on Pg. 12.

Typical Wiring

Conductivity measurement with LF 654 X electrodeless conductivity sensor

The LF 654 X electrodeless conductivity sensor is used to measure low to highest conductivity values. It can be used for measurements in hazardous or safe areas.

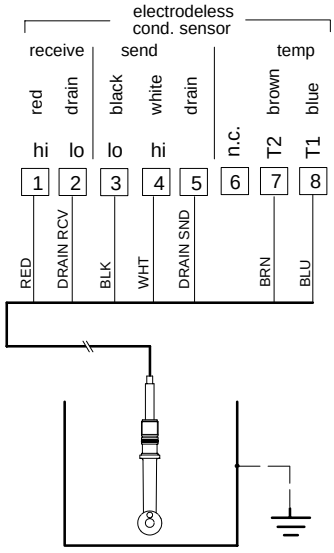

Fig. 8 Conductivity measurement with LF 654 X electrodeless conductivity sensor

Settings for LF 654 X electrodeless sensor

3 Operation

User Interface

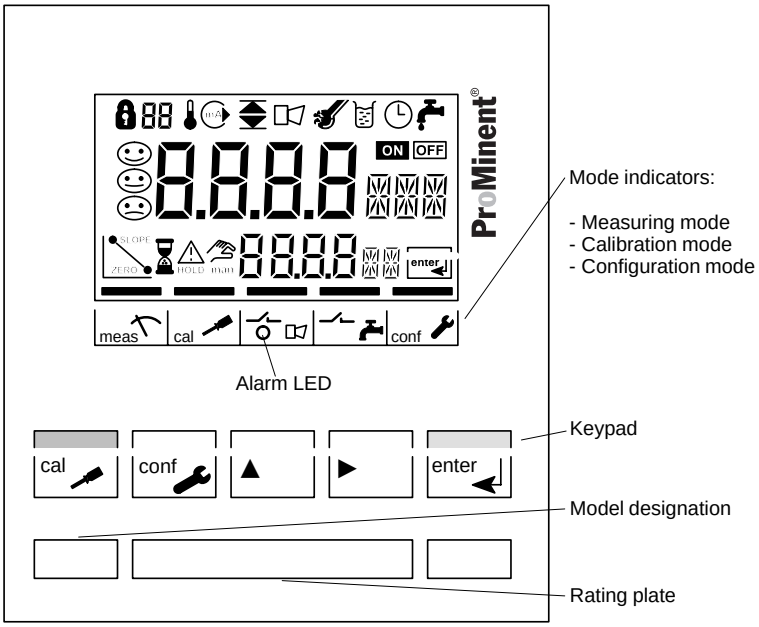

Fig. 9 Front view of DULCOMETER® 2201 X CondI

Display

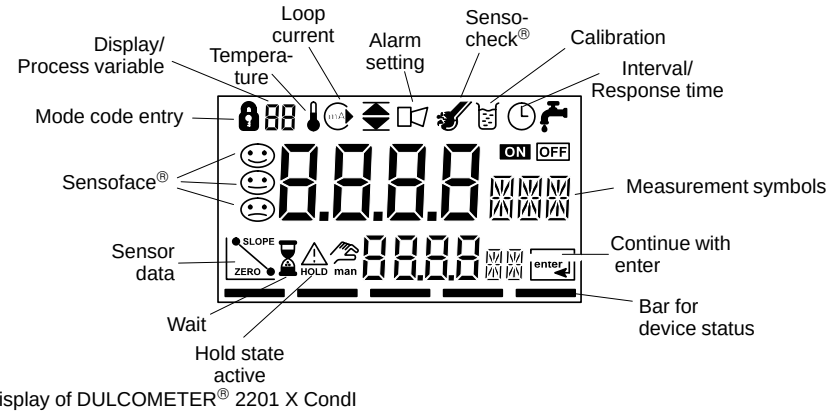

Fig. 10 Display of DULCOMETER® 2201 X CondI

Keypad

cal — Start, end calibration

conf — Start, end configuration

▶ — Select digit position (selected position flashes)

▲ — Change digit

enter — Prompt in display: continue in program sequence, Configuration: Confirm entries, next configuration step, Measuring mode: Display loop current

cal → enter — Cal info, display cell factor and zero point (see Pg. 23)

conf → enter — Error info, display last output error message (see Pg. 23)

▲ + ▶ — Start GainCheck® manual device self-test (see Pg. 15)

Safety Functions

Sensoface® sensor monitoring

Sensoface® provides information on the sensor condition. A sad “Smiley” indicates that there is a Sensocheck® message.
Sensocheck® signals a short circuit of the primary coil and its lines as well as an interruption at the secondary coil and its lines. Sensocheck® can be switched off. With Sensocheck® switched off, no friendly Smiley appears.

For more detailed information, see chapter “Diagnostic, Maintenance and Cleaning” (Pg. 24).

GainCheck® manual device self-test

Simultaneously pressing ▲ and ▶ starts the manual device self-test.

A display test is carried out, the software version is displayed and the memory and measured value transmission are checked.

Automatic device self-test

The automatic device self-test checks the memory and the measured-value transmission. It runs automatically in the background at fixed intervals.

Outputs

Current loop (4 to 20 mA)

The current is controlled by the process variable selected in the configuration.
The current characteristic can be configured as linear or logarithmic curve for conductivity and resistivity.
The current beginning and end can be set to represent any desired value.
If LIN (linear characteristic) is chosen, the minimum span is 5% of the selected process variable / measurement range. If LOG (logarithmic characteristic) is chosen, the minimum span is one decade within the chosen range.
To check connected peripherals (e.g. limit switches, controllers), the loop current can be manually specified (see Pg. 26).

Alarm

During an error message the alarm LED flashes.
Alarm response time is permanently set to 10 sec.

Error messages can also be signaled with a 22 mA signal via the loop current (see Configuration, Pg. 18).

Configuration

The device arrives from the factory configured and ready to operate as a conductivity transmitter. This section provides detailed procedures for changing operation values for specific applications.

Activate with **conf**
change parameter with ▲ and ▶,
confirm/continue with **enter**,
end with **conf.**

Mode code “1200”

During configuration the device is in the Hold state, the loop current is frozen.

When the configuration mode is exited, the device remains in the Hold state for safety reasons. This prevents undesirable reactions of the connected peripherals (e.g. limit switches, controllers) due to incorrect settings. The measured value and *Hold* are displayed alternately. Now you can check whether the measured value is plausible and specifically end the Hold state with **enter**. After 20 sec (measured value stabilization) the device returns to measuring mode.

Note

The configuration parameters are checked during the input. In the case of an incorrect input “ERR” is displayed for 3 sec. The parameters cannot be stored with **enter** until the input has been repeated.

Configuration parameters

Pictograph	Parameter	Choices	Factory setting
88	Process variable / meas. range Selected process variable and measuring range control loop current, limit values and display. Complete configuration required after change.	oo.oo mS / ooo.o mS / oooo mS ooo.o % ooo.o SAL	**ooo.o mS**
Conc	Concentration (only with %)	-01- NaCl (0 – 28 % by wt) -02- HCl (0 – 17 % by wt) -03- NaOH (0 – 22 % by wt) -04- H_2SO_4 (0 – 35 % by wt) -05- HNO_3 (0 – 28 % by wt) -06- H_2SO_4 (95 – 99 % by wt)	**-01-**
	Temperature display	°C °F	°**C**

	Temperature probe	Pt 100 / Pt 1000 / NTC 30 kΩ / NTC 100 kΩ	**Pt 100**
	Temperature compensation (not with % and SAL)	OFF LIN NLF (natural waters)	**OFF**
	Temperature coefficient (only with tc LIN)	xx.xx %/K	**02.00 %/K**
	Current characteristic (not with % and SAL)	LIN LOG	**LIN**
	Current beginning (4 mA) (only with LIN)	mS / % / SAL	**000.0 mS**
	Current end (20 mA) (only with LIN)	mS / % / SAL	**100.0 mS**
	Current beginning (4 mA) (only with LOG)	mS *	**0.1 mS**
	Current end (20 mA) (only with LOG)	mS *	**100 mS**
	Hold state	Last: Last current value Fix: Current specified	**Last**
	Hold value (only with Fix)	xx.xx mA	**21.00 mA**
	22 mA signal for error message	ON / OFF	**OFF**
	Sensocheck®	ON / OFF	**OFF**

* 0.1 / 1 / 10 / 100 / 1000 mS

Configuration is cyclical. To stop, press **conf**.

Calibration

In the calibration mode the cell factor can be modified in two ways. If the cell factor of the sensor in use is known under consideration of the installation conditions, it can be entered directly. Furthermore, the cell factor can be determined with a known calibration solution under consideration of the temperature.

Warning

When using other Foxboro sensors, the transfer ratio of the sensor must be entered before starting calibration (see Pg. 21)

Activate with **cal**, confirm/continue with **enter**, abort with **cal ➜ enter**

During calibration the device is in the Hold state. The loop current is frozen.

When the calibration mode is exited, the device remains in the Hold state for safety reasons. This prevents undesirable reactions of the connected peripherals (e.g. limit switches, controllers) due to incorrect settings. The measured value and *Hold* are displayed alternately. Now you can check whether the measured value is plausible and specifically end the Hold state with **enter** or repeat calibration with **cal.** When you end the Hold state, the device will return to measuring mode after 20 sec (measured value stabilization).

Calibration by input of cell factor

Activate calibration by pressing the **cal** key.
Using the ▲ , ▶ keys enter mode code *"1100"* and then press **enter**.

Using the ▲ , ▶ keys enter the cell factor. The lower display shows the conductivity value.

A change in the cell factor also changes the conductivity value.

When there has not been an entry for approx. 6 sec, conductivity and temperature are displayed alternately.

Press **enter** to confirm the cell factor.

The device remains in the Hold state. You can end the Hold state with **enter**. After 20 sec (measured value stabilization) the device returns to measuring mode.

Calibration with calibration solution

Note

Be sure to use known calibration solutions and the respective temperature-corrected table values (see Calibration Solutions, Pg. 37).

Activate calibration by pressing the **cal** key.
Using the ▲ , ▶ keys enter mode code *"1100"* and then press **enter**.

Immerse the sensor in the calibration solution.

After approx. 6 sec the lower display alternately shows the conductivity and temperature values. Read the conductivity value corresponding to the displayed temperature from the table of the used calibration solution (for tables see Pg. 37).

Using the ▲ , ▶ keys change the cell factor until the display shows the conductivity value from the table.

Make sure that the temperature is stable during the calibration procedure.

Press **enter** to confirm the cell factor.

The device remains in the Hold state. You can end the Hold state with **enter**. After 20 sec (measured value stabilization) the device returns to measuring mode.

Zero point calibration in air

Note

Zero point calibration is only required when very low conductivity values are to be measured.

Note

Before you start calibration, remove the sensor from the process, clean it and dry it up.

Activate calibration by pressing the **cal** key.
Using the ▲ , ▶ keys enter mode code *"1001"* and then press **enter**.

Using the ▲ , ▶ keys modify the zero point until the lower display reads 0 µS. If required, change the sign of the zero point!

When there has not been an entry for approx. 6 sec, the lower display alternately shows the zero-corrected conductivity value and the temperature value.

Press **enter** to confirm the zero point.

The device remains in the Hold state. You can end the Hold state with **enter**. After 20 sec (measured value stabilization) the device returns to measuring mode.

Input and adjustment of transfer ratio

Note

This function should only be used by experts. Incorrectly set parameters may go unnoticed, but change the measuring properties.

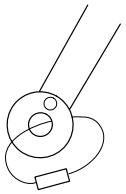
The device comes with a preset transfer ratio of 48.36 for the Model LF 654 X sensor. Should you use another sensor, you must enter another transfer ratio or determine it using a comparison resistor. After that, you can calibrate the sensor (see Pg. 19).

Note

Resistance measurement in test mode can only show the correct value of the test resistor when the transfer ratio has been correctly determined.

Activate calibration by pressing the **cal** key.
Using the ▲ , ▶ keys enter mode code *"1125"* and then press **enter**.

Using the ▲ , ▶ keys enter the transfer ratio of the sensor in the main display.



If you do not know the transfer ratio, it can be determined using a comparison resistor (recommended resistance value: 100 Ω). The transfer ratio must be adjusted until the corresponding resistance value is shown in the lower display.

Press **enter** to confirm the transfer ratio.

The device remains in the Hold state. You can end the Hold state with **enter**. After 20 sec (measured value stabilization) the device returns to measuring mode.

Adjustment of temperature probe

Note

This function should only be used by experts. Incorrectly set parameters may go unnoticed, but change the measuring properties. Especially for Pt 100 temperature probe, it is advisable to perform an adjustment.

Activate calibration by pressing the **cal** key.
Using the ▲ , ▶ keys enter mode code *“1015”* and then press **enter**.

Measure the temperature of the process medium using an external thermometer.

Using the ▲ , ▶ keys enter the determined temperature value in the main display. If you take over the temperature value shown in the lower display, the correction is without effect.

Press **enter** to confirm the temperature value.

The device remains in the Hold state. You can end the Hold state with **enter**. After 20 sec (measured value stabilization) the device returns to measuring mode.

Measurement

Measuring mode

In the measuring mode the main display shows the configured process variable and the lower display the temperature.

Cal info

With **cal** and mode code *"0000"* you can activate the cal info. Cal info shows the current calibration data for approx. 20 sec. The 20 sec can be reduced by pressing **enter**. During cal info the device is not in Hold state.

Error info

With **conf** and mode code *"0000"* you can activate the error info. Error info shows the most recent error message for approx. 20 sec. After that the message will be deleted. The 20 sec can be reduced by pressing **enter**. During error info the device is not in Hold state.

Hold state

The device will enter the Hold state under the following conditions:

For calibration:	Mode code *1001* Mode code *1015* Mode code *1100* Mode code *1125* Mode code *2222*
configuration:	Mode code *1200* Mode code *5555*

The loop current is frozen at *Last* or *Fix* (configuration Pg. 18).
If the calibration or configuration mode is exited, the device remains in the Hold state for safety reasons. This prevents undesirable reactions of the connected peripherals (e.g. limit switches, controllers) due to incorrect settings. The measured value and *Hold* are displayed alternately. Now you can check whether the measured value is plausible and specifically end the Hold state with **enter**. After 20 sec (for the measured value stabilization) the device returns to measuring mode.

Note  During error conditions the Hold state will not be active.

4 Diagnostics, Maintenance and Cleaning

Sensoface®, Sensocheck®

Sensoface® provides information on the sensor condition. A sad “Smiley” indicates that there is a Sensocheck® message.

Sensocheck® signals a short circuit of the primary coil and its lines as well as an interruption at the secondary coil and its lines. Sensocheck® can be switched off. With Sensocheck® switched off, no friendly Smiley appears.

Error Messages

When one of the following error messages is output, the device can no longer correctly determine the process variable or output it via the loop current.

During an error message the alarm LED flashes. The alarm response time is permanently set to 10 sec.

Error messages can also be signaled with a 22 mA signal via the loop current (see Configuration, Pg. 18).

Error info

With **conf** and mode code *“0000”* you can activate the error info. Error info shows the most recent error message for approx. 20 sec. After that the message will be deleted. The 20 sec can be reduced by pressing **enter**. During error info the device is not in Hold state.

Error number	Display (flashing)	Problem	Possible causes
Err 01		Sensor	- Wrong cell factor - Measurement range exceeded - SAL > 45 ‰ - Sensor connection or cable defective
Err 02		Sensor	- Unsuitable sensor
Err 03		Temperature probe	- Outside temp range - Outside temp range for TC - Outside temp range for SAL - Outside temp range for concentration
Err 21		Loop current	- Meas. value below configured current beginning - Wrong configuration for current beginning (see Pg. 18)

Error number	Display (flashing)	Problem	Possible causes
Err 22		Loop current	- Meas. value above configured current end - Wrong configuration for current end (see Pg. 18)
Err 23		Loop current	- Configured current span too small (Difference between current beginning and end)
Err 33		Sensocheck®	- Short circuit in primary coil - Short circuit of cable
Err 34		Sensocheck®	- Open circuit in secondary coil - Cable interrupted
Err 98		System error	- Configuration or calibration data defective; completely reconfigure and recalibrate the device - Measured value transmission defective - Memory error in device program (PROM defective)
Err 99		Factory settings	- EEPROM or RAM defective - Error in factory settings This error message normally should not occur, as the data are protected from loss by multiple safety functions. Should this error message nevertheless occur, there is no remedy. The device must be repaired and recalibrated at the factory.

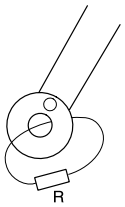
Diagnostics Functions

Cal info

Pressing **cal** and entering mode code *"0000"* is going to activate the cal info. Cal info shows the current calibration data for approx. 20 sec. During cal info the device is not in Hold state.

Test mode

Pressing **cal** and entering mode code *"2222"* is going to activate the test mode. In the test mode you can check the measuring equipment with a resistor. Sensoface® is disabled.



To do so, a comparison resistor is looped through the sensor. The comparison resistance value is indicated in the main display in kΩ. When the resistance value exceeds 2 kΩ, the display shows "– – – –".

R: e.g. 100 Ω

Pressing **enter** ends the test mode. The device goes to Hold state.

Error info

Pressing **conf** and entering mode code *"0000"* is going to activate the error info. Error info shows the most recent error message for approx. 20 sec. After that the message will be deleted. During error info the device is not in Hold state.

Display loop current

Pressing **enter** in measuring mode displays the loop current for a few seconds.

Current source

To check the connected peripherals (e.g. limit switches, controllers), the loop current can be manually specified.

Warning

In the current source mode the loop current no longer follows the measured value! It is manually specified.
Therefore, it must be ensured that the connected devices (control room, controllers, indicators) do not interpret the current value as a measured value!

Pressing **conf** and entering mode code "5555" is going to activate the current source mode. Specify the loop current using ▶, ▲ and **enter**. The actually flowing loop current is shown in the lower display. Pressing **conf** exits the current source mode again.

GainCheck® manual device self-test

The manual device self-test is started by simultaneously pressing ▲ and ▶.

A display test is carried out, the software version is displayed and the memory and measured-value transmission are checked.

Automatic self-test

The automatic self-test checks the memory and the measured-value transmission. It runs automatically in the background at fixed intervals.

Maintenance and Cleaning

Maintenance

The DULCOMETER® 2201 X CondI contains no user repairable components.

Cleaning

To remove dust, dirt and spots, the external surfaces of the device may be wiped with a damp, lint-free cloth. A mild household cleaner may also be used if necessary.

(15) Description of equipment or protective system

The transmitter type 22*1 X Condl is used for the recognition and processing of electrochemical quantities.

The maximum permissible ambient temperature is 55°C.

Electrical data

Current loop ..... in type of protection "Intrinsic Safety" EEx ib IIC
(terminals 10, 11) only for the connection to a certified intrinsically safe circuit with the following maximum values:
U_i = 30 V
I_i = 100 mA
P_i = 0,8 W

effective internal capacitance C_i = 20 nF
effective internal inductance L_i = 0,2 mH

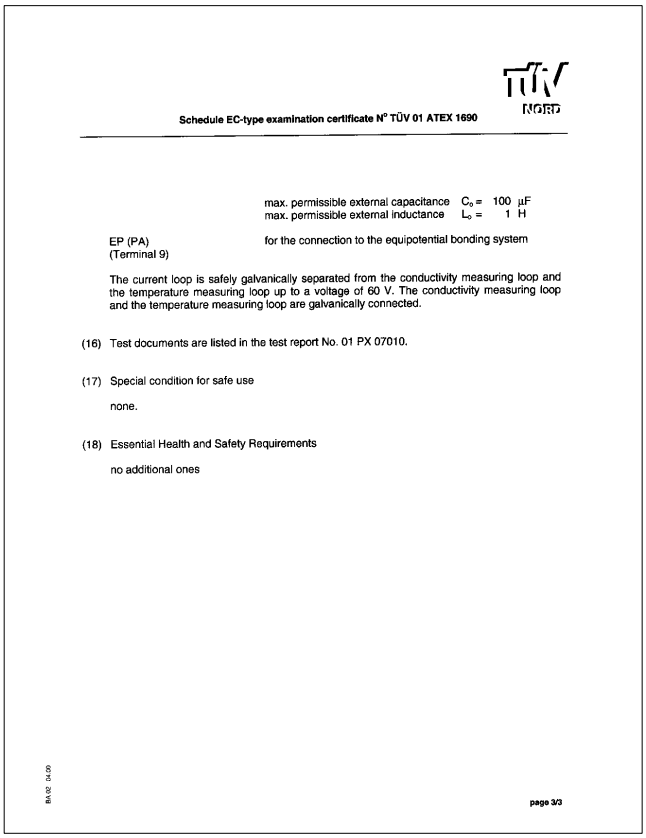
Conductivity measuring loop ..... in type of protection "Intrinsic Safety" EEx ia IIC
(terminals 1, 2, 3, 4, 5) Maximum values: resp. EEx ib IIC
U_O = 7,5 V
I_O = 63 mA
P_O = 80 mW
R_i = 80 Ω
Characteristic: linear
effective internal capacitance C_i = 3 nF
The effective internal inductance is negligibly small.

max. permissible external capacitance C_o = 11,1 µF
max. permissible external inductance L_o = 9 mH

or for the connection to the electrodeless conductivity sensor type SE654 X resp. type 871EC-SPO
Maximum cable length: 30 m

Temperature measuring loop .... in type of protection "Intrinsic Safety" EEx ia IIC
(terminals 7, 8) Maximum values:
U_O = 5 V
I_O = 3,5 mA
P_O = 5 mW
R_i = 1590 Ω
Characteristic: linear
effective internal capacitance C_i = 250 nF
The effective internal inductance is negligibly small.

BA 02 04.00



Schedule EC-type examination certificate N° TÜV 01 ATEX 1690

max. permissible external capacitance C_o = 100 µF
max. permissible external inductance L_o = 1 H

EP (PA) for the connection to the equipotential bonding system
(Terminal 9)

The current loop is safely galvanically separated from the conductivity measuring loop and the temperature measuring loop up to a voltage of 60 V. The conductivity measuring loop and the temperature measuring loop are galvanically connected.

(16) Test documents are listed in the test report No. 01 PX 07010.

(17) Special condition for safe use

none.

(18) Essential Health and Safety Requirements

no additional ones

BA-DZ 2414.00

Declaration of Conformity

EC Declaration of Conformity

We,

ProMinent Dosiertechnik GmbH
Im Schuhmachergewann 5 - 11
D - 69123 Heidelberg

hereby declare that, on the basis of its functional concept and design and in the version brought into circulation by us, the product specified in the following complies with the relevant, fundamental safety and health stipulations laid down by EC directives.
Any modification to the product not approved by us will invalidate this declaration.

Product description :	***Dulcometer transducer***
Product type :	***2201 X Cond, 2201 X CondI***
Serial number :	***see type identification plate on device***
Relevant EC regulations :	***EC - EMC - regulation (89/336/EEC subsequently 92/31 EEC)*** ***EC directive for devices in hazardous areas 94/9/EC***
Harmonised standards used, in particular :	***DIN EN 61326, DIN EN 50014, DIN EN 50020***
National standards and other technical specifications used, in particular :	
Date/manufacturer´s signature :	***June 12, 2001***
The undersigned :	*Dr.Rainer V. Dulger, Executive Vice President R&D and Production*

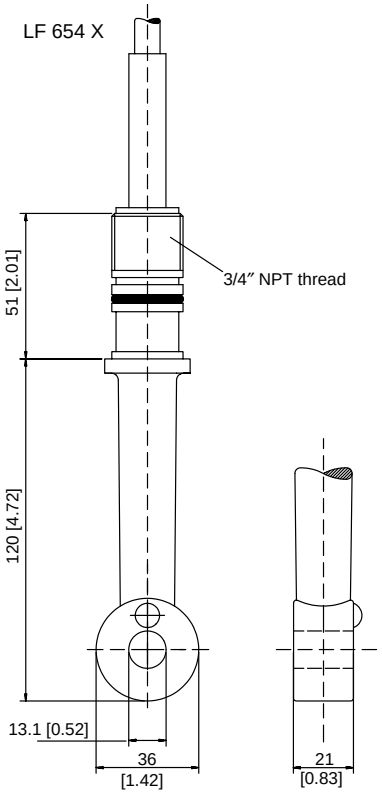
Sensors

LF 654 X

The LF 654 X electrodeless conductivity sensor is suitable for general measurements as well as for measurements in aggressive media.
The sensor material (PEEK) displays excellent chemical resistance to most aqueous solutions of acids, bases and salts. It is also excellent for organic solvents such as toluene, ethyl acetate, acetone, gasoline and carbon tetrachloride.
It is not recommended for sulfuric or nitric acid solutions above 70 %, nor is it recommended for Oleum applications.
The LF 654 X electrodeless conductivity sensor can be used in hazardous or safe areas.

Model LF 654 X (electrodeless sensor) by Foxboro		
Cell factor[1)]	2.15	
Transfer ratio[2)]	48.36	
Measurement range	0 to 1,999 mS/cm	
Resolution	0.01 mS/cm	
Material	Sensor O-rings	PEEK, glass-filled EPR
Process temp	-5 to +120 °C	
Process pressure[3)]	0 to 17.5 bar	
Temp probe	NTC 100 kΩ	
Explosion protection	Model 87 IEC-SPO KEMA No. Ex-96.D.0839 X EEX ia IIC T4 ... T6	
Installation	3/4″ NPT thread	
Cable	Length Connection	6 m wire end ferrules
Weight	Approx. 150 g	
Dimensions	See dimension drawing Fig. 11	

1) This value may differ for each individual sensor and depends on the installation conditions. The exact value must be determined with a calibration.
2) This typical value may differ for each individual sensor. The exact value must be determined with a calibration.
3) The combination of high pressure, high temperature and/or aggressive process medium reduces the sensor life span.



Note: All dimensions in mm [inches].
