

TOMAL® PolyRex Polymer Feed System

Integrated Dry / Liquid Polymer Feed System

The **TOMAL® PolyRex** is a turn-key automatic feed system for batch-wise preparation and metering of polymer solutions from powdered or liquid chemicals.

The **PolyRex** feeds an adjustable flow of powdered or liquid polymers and an adjustable flow of preparation and dilution water. The **PolyRex** uses a step-by-step mixing system to effectively hydrate and mix the polymer to a homogenous and activated polymer solution. The initial step is the hydration system, where the polymer is wetted, followed by water acceleration in the ejector, and the efficient but gentle agitating in the mixing tank. The **PolyRex** step-by-step mixing system provides you with the most efficient way to produce a polymer solution.
